“Technology In Motion” is a slogan that we have used for many years now and it’s a great description of what we do. For decades, we have been always innovating, improving our products and providing our customers with the best suspensions available. Part of staying on the cutting edge of suspension technology we always listen to what our customers are looking for. The last few years, the dominant request has been for an IRS system. Anything ranging from the antiquated C4 system to a modern double A-arm setup like what the new Corvette’s have.

While we have wanted to incorporate an independent rear suspension into our rear clip and chassis designs, we never could find a design that would significantly increase handling performance, yet package well at the same time. The increase in comfort would definitely be there as the rear tires could act independently of each other, but we were looking for more than just that. While the possibility of a double a-arm IRS design was discussed, the packaging of a suspension like that left a lot to be desired and we remained patient that we would find an IRS style that would fit our needs.

Then 3 years ago, Craig Morrison and our Lead Engineer Matt Jones were in Southern California to participate in Super Chevy Magazine’s Suspension Challenge. Interested in participating in some “extra-curricular” events, Craig and Matt took our ’55 Chevrolet to a number of different shows. One of these events was a run along the coast with a group of supercars. Ferraris, Lamborghinis and other exotics, along with our “GT55” enjoyed some of the great roads and scenery of Orange County, California.

It was on this run that we finally had the proper seed planted for an IRS design. The final stop on this run was at a very well respected Porsche-tuning shop, BBI Autosport. Amongst the spectacular cars on display, there was a Porsche GT3 Cup car on one of the lifts, and with its belly pans removed the rear suspension was in full view. As Matt was examining the suspension, both he and Craig began to discuss the possibilities of this Porsche suspension being able to work for a hot rod and muscle car application. The track width was right, the size of the tires would work and more importantly, it was in a very compact space, perfect for being able to put it under the floor of many of the cars that we deal with.

Returning from their successful trip to Southern California, Matt began to explore the possibilities of using this suspension. Working with Betim and Joey at BBI, Matt had them send up the various suspension components so he could model the parts and begin working towards a suspension design. Unfortunately, the Porsche components were so singularly designed for a rear-engine, rear wheel drive Matt soon found that they weren’t a viable option. The idea of a multi-link IRS, in theory, was still a possibility, the only thing was to find the right OE components.

During this development time, the 5th Generation Camaro came onto the scene...
Matt’s ’69 Camaro for testing and finalized and the prototype installed into the first part of 2013, the design was a direct replacement for the OE unit. With everything finalized, it was time to go-to piece for our all new multi-link close, this was definitely going to be our bomb-proof, the Dana gear set would be cast-aluminum Dana 60 differential that were capable of, Strange was debuting a Engineering. Thanks to the massive talking to our long time partners at Strange year at SEMA when Craig and I were design that actually improves the cornering performance of the vehicle. We have dedicated two pages of this year’s catalog onto something that was special. It was as comfortable to drive as a new car, but it also significantly added to the performance, helping the car drive around corners harder than ever before.

Throughout the last quarter of 2012 and the first part of 2013, the design was finalized and the prototype installed into Matt’s ’69 Camaro for testing and evaluation. Swing bar rates were tweaked and the JRI shock valving was perfected as the car was driven thousands of miles on roads of various quality. Even in the early stages of testing, we knew we were working on a quote for your project.

2014 is going to be an exciting year, the Multilink IRS, new chassis designs in the works and a dedication to our slogan of “Technology in Motion” that is as strong as ever. As always, we owe you a debt of gratitude and a heartfelt “thank you.” If it wasn’t for your support and suggestions we wouldn’t be where we are today, nor would we be building the things we do. Your business is valued and our staff welcomes your comments as to how we can provide you with better parts and service. We look forward to being part of your next project. Thank you!

and through SEMA’s Technology Transfer program, Matt was able to evaluate the multi-link design that GM had created for this vehicle. The vehicle layout was right (front engine, rear wheel drive), the track width was correct and just as important, the size of the suspension was what we were looking for. The key part of the 5th Gen Camaro suspension was the upright and hub assembly, everything else Matt would design.

The final piece of the puzzle came last year at SEMA when Craig and I were talking to our long time partners at Strange Engineering. Thanks to the massive amounts of power that the LS platforms were capable of, Strange was debuting a cast-aluminum Dana 60 differential that was a direct replacement for the OE unit. Not only was this going to be absolutely bomb-proof, the Dana gear set would be very quiet. After inspecting the piece up close, this was definitely going to be our go-to piece for our all new multi-link design.

When asked to evaluate the handling of Matt Jones’ Multilink IRS-equipped 1969 Camaro, which was entered in the Super Chevy magazine Suspension Challenge, test driver Mary Pozzi — an 11-time SCCA Autocross Champion — summed it all up by saying “This is THE BEST suspension I’ve ever felt underneath a car on a track.” That’s a strong testimonial from a highly credentialed professional.

It’s important to understand that not all Independent Rear Suspensions are the same. Early IRS setups, typified by Jaguar, Cobra and C2/C3 designs (which have been mimicked by several aftermarket manufacturers) have a number of disadvantages. These include poor toe and camber control, little anti-squat and spindle support, limited wheel offsets and requiring a relatively large “package.” They also have horsepower limitations.

The Morrison Multilink IRS can trace its design lineage to a number of the world’s most renown “exotics” that include late model Ferrari, BMW, Porsche, and Nissan GT-R automobiles.

There are a number of important advantages to the new Morrison Multilink IRS; all of which add up to optimum handling and long-term dependability.

**INSTALLATION INFORMATION**

- Available in four track widths: 55.5", 57.5", 59.5" and 61.5" (wheel mounting surface to surface width)
- Wide variety of gear ratios: A half-dozen ratios between 3.54 and 5.13
- Brake options: 12.4" rotor with floating caliper, Wilwood 14.3" with W6A caliper or 14.4" with OEM Brembo caliper.
- Minimum wheel size: 17"* with 12.4" brake rotors, 18" with Wilwood brakes.

* Only certain wheels will work. Please call for details.
Functionally Independent Design
The decoupled links allow changes to one parameter without affecting others. For example, during the design phase we were able to make an adjustment to the camber curve with little or no effect on the roll center. This gives you the freedom to set the car up for optimal handling under varying conditions.

Direct Load Paths
Through use of decoupled lower links a direct load path is created that prevents control arm failure. Moreover, most bushings are loaded in their radial direction for maximum stiffness.

Superior Knuckle Support
Typical wishbone designs attach at three points in single shear. The Morrison Multilink IRS has four attachment points to control freedom of movement, three of which are double-shear attachments.

Improved Wheel Control
With the AME Multilink IRS you can establish functionally independent camber, caster and toe curves. Moreover, critical toe link locations can be tuned to allow dynamic steering while maintaining stability in high bump situations. For example, you can have up to 1° toe at max bump travel. The minimized link deflection and high durometer bushings help maintain precise wheel alignment.

Ride Quality Improvements
Unsprung vehicle weight is reduced by approximately 100 lbs., requiring less spring rate to control wheel movement. NVH (noise/vibration/harshness) is reduced because it must travel through three sets of bushings before reaching the driver’s compartment.

Unique Cradle Design
Not only does this facilitate installation of the Multilink IRS in most Morrison GT Sport chassis, but makes it easily adaptable to other vehicles. It can be aligned to the vehicle during installation and provides excellent serviceability. Loads from the coil-overs transfer to the vehicle frame, not the suspension cradle.
Give Any Tri-5 Chevy Sports Car Handling!

Simply replace the 50-plus year-old chassis with Art Morrison’s computer-designed “GT Sport” package!

It’s been over a thousand GT Sport chassis ago that our “Project GT55” debuted to rave reviews and literally helped fuel the “resto mod movement.” The concept of taking a classic design like the Tri-5 Chevy and giving it superior handling, an improved ride, and a contemporary stance has certainly resonated with a large number of enthusiasts. Our “Project GT55,” which was equipped with a healthy 530 horsepower SBC crate motor and T-56 6-speed tranny, was initially put through its paces by the editors of Super Chevy magazine and recorded impressive numbers in acceleration, braking, skid pad and slalom that put many exotic sports cars to shame.

Now we’ve made a good thing even better. We started up front, developing the “Sport IFS” front suspension package. It features more aggressive geometry, heavy-duty control arms and larger polyurethane bushings. Benefits include improved high speed stability, the ability to run larger front tires, minimized nose-diving in hard braking and better overall handling.

The latest development is the availability of our remarkable new Multilink I.R.S. in Tri-5 GT Sport chassis. This attribute clearly optimizes the handling characteristics of any “shoebox” Chevy and leaves nothing on the table.

Of course, the fundamental beauty of the AME GT Sport chassis is that it’s a virtual “bolt-on” installation. You can literally unbolt the body from the OEM frame and slide a GT Sport chassis into place. While many of the nation’s top pro builders use GT Sport chassis, many do-it-yourselfers have successfully installed them.

Whatever your performance goals are, AME can configure at GT Sport chassis to meet those needs. Let our tech consultants help you achieve those goals.

Make a good thing even better by equipping your Tri-5 with the new AME Multilink IRS. It’s an available option that will set your ride apart from others. It’s much quieter than conventional setups, too.

An Art Morrison GT Sport chassis was selected as the foundation for Street Rodder magazine’s 2011 Tour Car. Street Rodder’s Jerry Dixey put over 20,000 miles on the car during the course of the year-long promotion, with glowing reports on the car’s handling and ride. With over a thousand Tri-5 Chevys now equipped with GT Sport chassis, it has become the standard of excellence for resto-mod projects.

The GT55 (shown in its original paint on the next page for the Super Chevy test) earned a “Top 5” spot for Street Machine of the Year from Goodguys and subsequently went on a year-long tour. It was also featured on “The Smoking Tire” show. Use the barcode scanner on your smart phone and link up to footage with “The Smoking Tire” review of the GT55.
Proven Performance!

Comprehensive skid pad, slalom, acceleration and braking tests confirm that Morrison’s GT55 performs like a sports car

Super Chevy Magazine performed a series of tests on Art Morrison Enterprises, Inc. “GT55” project vehicle. Testing was conducted with the GT55 after it was driven 1,200 miles from Tacoma, WA to Los Angeles, CA. There were no modifications made to the chassis or to the BF Goodrich tires before testing. The results (vs. Road & Track tests) were:

Now your classic 1955-1957 Chevy can have the handling characteristics of an exotic sports car! All it takes is a CAD-engineered replacement chassis from Art Morrison Enterprises, Inc., and it’s a project that most competent do-it-yourselfers can accomplish in their own home garage. Little or no welding is required to install this chassis.

Up front, we’ve designed a suspension that provides an excellent combination of ride comfort, cornering agility and high-speed stability. Tubular steel control arms and Strange Engineering adjustable coil-over shocks are employed, while a matched rate 1” diameter sway-bar controls body roll.

In place of the antiquated OEM steering box we offer the superb power rack & pinion from DSE. The 20:1 ratio is ideally suited for most highway driving. Other options available. The chassis has been engineered to accommodate all popular transmissions, including Powerglide, TH350, TH400, and 700-R4 automatics, as well as any 4-speed, Tremec TKO and T-5 6-speed, Richmond 5-speed or 6-speed manual transmissions. Integrated engine mounts also allow for easy installation of a Chevrolet small-block or big-block (BBC requires firewall modifications and LS engines require adapter plates to utilize SBC mounts).

The rear suspension is a triangulated 4-bar with Strange Engineering adjustable coil-over shocks. This is a vast improvement over the stock Chevy setup for a variety of reasons—not the least of which is total control of the rear end during acceleration and cornering. What’s more, by eliminating the leaf springs, there is room to run tires up to 11.5” (275mm) section width within the stock wheel wells (if the car is “mini-tubbed” tires as large as 345mm can be fit under the car). The suspension’s performance is enhanced with the addition of a 3/4” sway-bar to minimize body roll.

Another benefit of the Morrison chassis is that it lowers the car some 3-4” to improve handling and give it a contemporary stance. Integrated into the chassis are specially designed passageways in the frame crossmembers to route the exhaust system through so ground clearance is not compromised.

Clearly, this is the foundation that any contemporary Tri-5 Chevy should be built on! A Morrison chassis is an investment in driving enjoyment that you’ll enjoy for years to come and its increased value, should you ever want to sell it.

CHASSIS WITH SUSPENSION: includes un-coated upper and lower control arms, spindles, power rack & pinion, front and rear sway-bars, 9” housing, triangulated 4-bar links, and Strange adjustable front & rear shocks with springs. $13,000.00

COMPLETE CHASSIS: includes chassis with suspension, front disc brake kit, SVO rear disc brake kit, Strange 31-spline axles, center section mounting kit, Strange nodular-iron center section with posi-traction and trans crossmember. Everything you need for a rolling chassis, less tires and wheels. $15,990.00
Technical Features & Benefits

The AME Tri-5 chassis is designed for optimum roll center stability under all conditions. The roll center is maintained almost perfectly thru the first 3° of body roll and beyond 3° the roll center movement is minimized resulting in a suspension that is vastly improved over a Mustang II type suspension. And the rate of vertical movement is almost 1:1 with suspension movement, while the path it follows during transitions (braking, cornering, acceleration) is very smooth. This results in very consistent, stable and predictable vehicle handling.

Caster
Caster has been increased to +5° (from normal +2°) to provide improved stability at speed. This also improves the tire contact patch and weight distribution under cornering.

Camber Curve & Anti-Dive
Due to the design of the control arm angles, camber control is enhanced throughout the four inches of suspension travel, while minimizing side movement of tire contact patch (side scrub). The side angle of the control arm contributes to increased anti-dive for better stability under hard braking, while serving to provide a smooth and supple ride.

Bumpsteer
The bumpsteer curve has been designed to match camber and caster curves. The vehicle will track straight with minimal steering correction—even on bumpy pavement.

Ride Height
Vehicle will be approximately 3-4 inches lower than stock. To make the vehicle any lower, the recommended method is to use dropped spindles.

Specifications:
Wheelbase: 115 inches
Frame: Mandrel-bent 2"x4" rectangular tubing
Assembly: Fixture welded Finish: Bare metal only.
Header Kits
Engineered specifically for small block, big block and Chevy LS engines installed in a Morrison GT Sport chassis. They all feature heavy-gauge tubing and thick 3/8" flanges to assure trouble-free dependability. Ball-style collectors are employed to facilitate leak-free hook-ups to the exhaust system. Prices include header bolts and gaskets. Ceramic-metallic coating is available for an additional $400 per pair.

- 32555831 Small Block Chevy Headers with 1-3/4" Primaries & a 3" Collector $650.00 (pr)
- 32555835 Big Block Chevy Headers with 2" Primaries and a 3" Collector $650.00 (pr)
- 32555833 LS Headers w/1-3/4" Primaries and a 3" Collector (w/O2 Sensors) $650.00 (pr)

We are now a dealer for Ididit Steering Columns. Please call for specific options, pricing and availability.

Steering Linkage
This convenient kit contains the components you’ll need to connect the DSE power rack to the steering column. Available in polished stainless or bare.

- 32555860 Steering Link Kit (Bare Metal) $210.00
- 32555865 Polished S/S Steering Linkage Kit $350.00

Body Mount Kit
Mounting a Tri-5 body on a Morrison GT-Sport chassis is facilitated with this handy kit, which has the necessary body bushings and stamped components to ensure a secure attachment.

Tri-5 Body Mount Kit ......................... From $125.00

Brake Line Kits
Here’s everything you’ll need to “plumb” the brake lines on your GT Sport Tri-5 chassis. Stainless steel is used exclusively for the lines and fittings to assure you of total long-term reliability. Use in conjunction with our Master Cylinder kit.

- 32555840 Brake Line Kit for GT Sport Chassis $645.00

LS Engine Mounts
We’ve developed a highly effective mounting package for LS engines that incorporates Energy Suspension poly-urethane bushings, and adapter plate with a positive stop, and OEM-style Chevy mounts. It’s easy to use and very secure.

- 32555740 LS Engine Mnts for GT Sport Chassis $175.00

M/C Adapter & Line Kit
Adapter fits you mount a tandem-style dual reservoir Master Cylinder to the firewall, and allows use of the stock Chevy pedal assembly (and the OEM ratio). The line kit lets you plumb the tandem M/C into the brake system.

- 32555811 M/C Adapter for Tri-5 Chevy $15.00
- 32555856 M/C-to-Chassis Brake Line Kit $80.00

Housing Breather Kit
Eliminate those pesky leaks that 9” Ford housings are known for. This “catch can” mounts above the housing. Excess pressurized gear oil goes to the tank, is vented, and drains back after parking the car.

- 40403020 Housing Breather Vent for Hose $15.00
- 40403030 Housing Vent Tank $45.00

LS Header Kit
Engineered specifically for small block, big block and Chevy LS engines installed in a Morrison GT Sport chassis. They all feature heavy-gauge tubing and thick 3/8" flanges to assure trouble-free dependability. Ball-style collectors are employed to facilitate leak-free hook-ups to the exhaust system. Prices include header bolts and gaskets. Ceramic-metallic coating is available for an additional $400 per pair.

- 32555831 Small Block Chevy Headers with 1-3/4" Primaries & a 3" Collector $650.00 (pr)
- 32555835 Big Block Chevy Headers with 2" Primaries and a 3" Collector $650.00 (pr)
- 32555833 LS Headers w/1-3/4" Primaries and a 3" Collector (w/O2 Sensors) $650.00 (pr)

What Our Customers Say...

“I looked at other chassis but after seeing the Art Morrison Chassis for the first time my mind was made up, it would be the Art Morrison chassis. Quality and design of the chassis was far superior to anything I had seen. Stance is perfect, ride and handling is great which resulted in an awesome 56 Chevy and has won numerous awards, and it all starts with the right chassis.”
Carl Gillihan
Escalon, CA
Chassis #366

“This car really excites me. I just love the way it rides and drives. With the 555 BBC engine, my Nomad accelerates hard, and with the Art Morrison Ent. Chassis it just glides down the highway. I am very proud of this car.”
Dave Stuart
Peru, IL
Chassis #555

“My ’55 was clocked at over 205 mph at Bonneville and it was steady as a rock, thanks to the AME chassis and special front control arms you built with extra camber for high speed use. I can’t wait for next year!”
Bob Johnson
Gainsville, GA
Chassis #96

“At Weber Body LLC we use only the best components to build our customers dream cars that’s why we choose the GT Sport chassis by AME. It offers a great stance and handles like a sports car. This is our fourth Tri-5 with a chassis from AME and in process of building the fifth. What a great company to work with. Thanks AME”
John Weber
Cobb, CA
Chassis #339

Get State-Of-The-Art Handling For Your 1953-1962 Corvette!

Following the very successful launch of our GT Sport chassis for 1955-57 Chevys, AME’s engineering staff focused its attention on the First Generation Corvette. While the classic styling of 1953-62 ‘Vettes has legions of admirers, the car’s notoriously harsh ride and dubious handling characteristics have prevented enthusiasts from enjoying a driving experience in a manner that owners of C5 and C6 Corvettes have come to expect. In addition to providing a phenomenal “bolt on” improvement for those First Generation Corvette owners willing to step up, this latest addition to Art Morrison’s GT Sport Chassis line provides an excellent foundation for anyone wanting to build a classic Corvette-bodied “kit car.” There are a number of 1953-55, 1956-57 and 1958-62 style bodies on the market that would lend themselves well to this particular application.

The first chassis off the production line became the foundation for Art Morrison’s “Project 3G” 1960 Corvette, which won several important construction awards and raised the bar in performance through a series of tests conducted by leading automotive publications. With an average of 1.05 Gs on the skid pad, a 116-foot braking distance from 60 mph and quarter mile times in the low 12s at over 120 mph, the car exceeded a “G” in each of the measured performance criteria.

Subsequently, many other 1st generation Corvettes have been given a new lease on life with a Morrison GT-Sport chassis. It’s a project that is well within the scope of any competent do-it-yourself builder.

Computer Designed Chassis

It’s important to note that the suspension of the Morrison GT Sport chassis has been engineered using special software and the frame is designed using contemporary CAD/CAM technology. Accordingly, the vehicle performance and manufacturing accuracy are far superior to what was available over 50 years ago, when the original “C1” Corvette was designed and built.

**BARE CHASSIS:** includes welded bumper-to-bumper profile 2”x4” frame, body mounts, bumper mounts, center frame, exhaust holes, core support, engine mount towers, trans x-member brackets. $8,035.00

**CHASSIS WITH SUSPENSION:** includes bare chassis, C6 Corvette upper and lower control arms and spindles, power rack & pinion, front and rear sway bars, 9" housing triangulated 4-bar links, and Strange adjustable front and rear shocks with springs. $14,213.00

**COMPLETE CHASSIS:** includes chassis with suspension, C6 13” front disc brake kit, SVO rear disc brake kit, Strange 31-spline axles, center section mounting kit, Strange nodular-iron center section with posi-traction and trans crossmember. Everything you need for a rolling chassis, less tires and wheels. $17,598.00

Use the barcode scanner on your smart phone to see The Smoking Tire review of the 3G Corvette.
How AME’s Engineering Team Obtained Great Handling Improvements For “C1” Corvettes...

**C6 I.F.S. Components**
The first step in obtaining vastly improved handling was to employ the forged aluminum control arms and spindles from 2005-up Corvettes. In order to take advantage of the C6 Corvette’s I.F.S. (which has exceptional geometry in stock form), several revisions were required to fit under the narrower 1953-62 Corvette body.

**Track Width**
While the C6’s hub-to-hub track width was narrowed, AME’s Engineering Department slightly increased the scrub radius over the C6’s very small amount. Accordingly, when 9-inch wide rims (with 6.5” back-spacing) are employed, an excellent balance is achieved between steering feedback and driving performance. Through reducing the wheel's offset, it is also possible to fit the car with larger, high performance brake calipers.

**Camber Angle & Roll Center**
The Front View Swing Arm (FVSA) length has been shortened to better maintain camber angle while cornering. At the same time, the static roll center height was reduced to minimize side scrub and jacking force. As a result, straight line stability and ride quality have been enhanced.

**Caster Angle**
Static caster has been reduced to +6° to promote a crisper steering “feel” and to counteract the rise/fall effect of increased scrub radius (as compared to the stock C5 geometry). This also provides an improvement in roll center migration.

**Lower CG**
By providing through-frame passageways for the exhaust system, the AME GT Sport chassis for C1 Corvettes allows for a lower stance, while maintaining the necessary ground clearance. This enables the vehicle to have a lower Center of Gravity (CG).

**Triangulated 4-Bar Suspension**
A major difference between the Morrison GT Sport chassis for the 1953-62 Corvette and C6 ‘Vette is the use of a special triangulated 4-bar rear suspension instead of an I.R.S. There are several reasons for this—not the least of which is the track width of the C6 unit. The triangulated 4-bar setup performs well in terms of acceleration control and provides excellent lateral stability.

**Breaking the Triple 1-G Barrier**
Our Engineering Department has done in-depth calculations and determined that with the proper combination of power, tires and brakes, a Morrison GT Sport chassis-equipped C1 Corvette should be able to exceed 1-G force on the skid pad, in acceleration, and braking. Our Project 3G ‘Vette has done it!
Due to popular demand, we have developed another GT Sport chassis for the First Generation Corvette; one that uses an AME Sport IFS front suspension with a Wilwood spindle instead of C6 Corvette components and facilitates the use of front wheels with diameters down to 15”.

Like our original GT Sport chassis, you can simply unbolt the stock 1953-62 Corvette chassis, roll it away, and replace the ancient technology with 21st Century dynamics. Moreover, you can easily upgrade to LS power and most any popular standard shift or automatic transmission.

The Sport IFS is augmented by Strange adjustable coil-over shocks and an adjustable anti-sway bar, while it also utilizes a power rack & pinion steering. This makes for nimble, sure-footed handling that’s a quantum improvement over stock.

A triangulated 4-bar rear suspension with a 9” rear end can handle an abundance of power while also providing excellent lateral support. Suspension comes courtesy of Strange adjustable coil-over shocks, with further ride fine tuning possible with an AME adjustable anti-sway bar.

Special passageways for the exhaust are built into the frame, which allows for a lower CG and ample clearance. This also facilitates a lower stance. The crossmembers also serve to stiffen the chassis, which significantly improves handling.

Extensive engineering and suspension analysis confirms that the performance of this new C1 chassis is on an even par with our original GT Sport chassis with C6 components. Given the proper amount of horsepower, big brakes and a good set of high performance tires, it’s quite possible to achieve 1+Gs in acceleration, braking and the skid pad.

**BARE CHASSIS:** Includes welded bumper-to-bumper profile 2”x4” frame, body mounts, bumper mounts, center frame, exhaust holes, core support, engine mount towers, trans x-member brackets. $8,035.00

**CHASSIS WITH SUSPENSION:** Chassis, Sport IFS control arms, Wilwood Pro spindles, Strange adjustable coil-overs, springs, rack & pinion steering, 9” housing and triangulated 4-bar suspension, adjustable front & rear anti-sway bars. $13,053.00

**COMPLETE CHASSIS:** Chassis with suspension, front disc brake kit, SVO rear disc brake kit, Strange Engineering 3rd member, Strange Engineering 31-spline axles. $16,043.00
An increasingly popular “family” of vehicles to benefit from an Art Morrison GT-Sport chassis is the venerable 1949-54 Chevy. But it’s important to tell you how we got there. Our first GT Sport chassis were CAD engineered, but all the data on the base frame rails was accumulated via physical measurements. Not so this latest masterpiece. A remarkable device called a “Faro Arm” which literally “traced” every square inch of the OEM Chevrolet frame was employed to directly transmit X-Y-Z data directly into the computer. This eliminates any chance of human error, and guarantees that the body of your 1949-54 Chevrolet will fit superbly.

Once the basic parameters were obtained, Morrison’s engineering staff went about designing a front and rear suspension package that would deliver the handling and ride that has made the original GT-Sport chassis for Tri-5 Chevys the unquestioned industry leader. With almost 900 of these chassis in use as of this writing, there is a strong foundation to build on.

Up front, Morrison’s engineering team has developed a sophisticated Independent Front Suspension (IFS) that employs tubular steel control arms, adjustable coil-over shocks, a beefy sway bar and Wilwood front spindles. A power rack & pinion (20:1 ratio) handles the steering.

Since most builders will want to have something more potent than the original 6-cylinder “stovebolt” engine, the chassis will also have motor mounts for the popular small block V8, or the new LS-series powerplants. Likewise, a wide variety of manual and automatic transmissions can be employed, including Powerglide, TH350, TH400 and 700R4 automatics, plus any 4-speed, Tremec TKO and T-56 6-speed, as well as Richmond 5 or 6-speed manual transmissions.

The rear suspension is AME’s highly regarded triangulated 4-bar setup, which gives excellent straight-line and lateral control. Strange Engineering adjustable coil-over shocks and a sway bar complete the package.

With a wide variety of body styles that this chassis will work with, including the unique “fastback” sedans and elegant Bel Air hardtops, let your imagination take over!

CHASSIS WITH SUSPENSION:
Includes frame, with 3” exhaust hole, uncoated upper and lower control arms, spindles, power rack & pinion, front and rear sway bars, 9” housing, triangulated 4-bar links and Strange adjustable front and rear coil-over shocks with springs. $13,143.00

COMPLETE CHASSIS:
Includes chassis with suspension, front disc brake kit, SVO rear disc brake kit, Strange 31-spline axles, center section mounting kit, Strange nodular iron center section with Positraction. It’s a rolling chassis, less tires and wheels. $16,043.00

When the engineering team at Art Morrison Enterprises set about designing a GT Sport chassis for 1949-54 Chevrolets they employed the characteristics of AME’s highly successful Tri-5 chassis. It is exceptionally stable, corners hard without appreciable lean, won’t “dive” under braking, and has a great ride.
It's Easy To Update Any 1949-'54 Chevy With An AME GT Sport Chassis

Morrison’s engineering team proudly introduces a GT-Sport chassis for the 1964-72 Chevelle. The biggest challenge faced by AME's designers was to place the chassis as far under the body as possible to reduce the amount of frame visible from under the car. They developed a unique inner-angled frame rail that tucks right under the floor pan. This provides an increase in ground clearance, which allows for a lower stance. And, as you know, lowering the CG of a vehicle improves its handling.

Another key to better handling is a stiff chassis, and to this extent AME engineers are focusing on increased torsional rigidity. Stiffening the chassis does not by itself make for a harsh ride. You should know that the suspension provides an optimum balance of handling and comfort. Our goal is to provide Chevelle owners with a great overall ride, while still providing exceptional corner-carving ability.

Extensive development work on the suspension package has resulted in optimizing various parameters (camber angle, roll center, caster angle, CG, etc.) and the creation of suspension components that will deliver optimum handling, ride and “0” bump steer.

**CHASSIS WITH SUSPENSION:** Includes Sport IFS control arms, C6 knuckles, bearings and hubs, Strange adjustable shocks with springs, front and rear sway bars, power rack and pinion, triangulated 4-bar links and 9” housing. $14,383.00

**COMPLETE CHASSIS:** Includes chassis with suspension, C6 Corvette front disc brake kit, SVO rear disc brake kit, Strange S/S street axles, center section mounting kit, Strange S-series center section and transmission mount. Everything you need for a rolling chassis, less tires and wheels. $17,678.00

Fits all 1964-72 GM A-body cars! Owners of Pontiac GTO/LeMans, Olds 442 and Buick GS can enjoy GT-Sport handling. El Caminos, too!

**NOTE:**
Special inner-angled frame rails tuck tightly under body
If you're looking to build a "sleeper," Art Morrison's new GT Sport chassis for 1947-53 Chevrolet pickup trucks is the key. Imagine having a 60-plus year-old truck that handles like a new Corvette. Our patina-highlighted "Farm Truck" caused more than a few jaws to drop performance pad testing for a Custom Classic Trucks story.

The "High Performance" version of this chassis features a "Sport" independent front suspension with beefy 1 5/16" diameter upper control arms and upsized poly-bushed rod ends that combines with coil-over shocks and anti-sway bar (both adjustable) to provide exact handling. It's also available with an Air Spring+Plus suspension package.

As you can tell by the "Farm Truck" photo, the ride height is quite low and requires the bed floor to be raised about two inches. The rugged 2x6 frame is designed to "tuck in" the exhaust system for optimum ground clearance. A 4-bar rear suspension with "Johnny Joint" rod ends and a Panhard bar provide perfect anchors for the reinforced 9" rear.

Like all other Morrison GT Sport chassis, all required body mounts, core supports and bumper mounts are included to provide a virtual "bolt on" build. It can accommodate virtually any V-8 engine/transmission (stick or automatic) combination. An optional pedal mount makes for a clean installation. Truly, the High Performance AME GT Sport chassis represents a superb investment in fun driving and overall value.

BARE CHASSIS: Includes welded bumper-to-bumper 2"x6" frame, body mounts, bumper mounts, exhaust notches, core support, engine mount towers, trans x-member brackets. $6,950.00

CHASSIS WITH SUSPENSION: Chassis, Sport IFS control arms, 2" dropped Wilwood PRO Spindles, Strange adjustable coil overs, springs, rack & pinion steering, 9" housing, parallel 4-bar tubes with Johnny-Joint ends, rear mounted panhard bar, adjustable front & rear anti-sway bars. $12,773.00

COMPLETE CHASSIS: Chassis w/suspension, front disc brake kit, SVO rear disc brake kit, Strange Engineering 3rd member, Strange Engineering 31-spline axles. $15,673.00
It's tough to call this chassis “Standard,” as it provides a quantum leap in ride and handling over the OEM Chevrolet setup. The primary difference between this and the “High Performance” GT Sport chassis shown on the previous page is that it employs an independent front suspension designed more for relaxed street use. Other differences include the use of poly-bushed stainless steel rod ends in the 4-bar rear suspension (instead of “Johnny Joints”) and a rear frame configuration that allows the bed to be left stock. The ride height is also a bit higher than the “High Performance” version.

Because of these subtle differences, we've been able to lower the price of the "Standard" chassis, making it a more affordable build. It's ideally suited to the custom classic truck enthusiasts who wants nimble handling and a great ride—but isn’t looking to shave a few seconds from their lap times at Track Day!

The beefy 2x6 main rails and strategically placed crossmembers serve to provide a solid foundation for any engine and transmission combination, with adjustable coil-overs on all four corners and an anti-sway bar complimenting the IFS, it's easy to get the perfect balance of performance and comfort. For the “traditionalist,” a leaf spring rear suspension is an available option.

A power rack & pinion makes steering a breeze, and the beefy braced 9” rear end can be fitted with a wide range of ring & pinion gears to optimize your drivetrain. This is the new “standard” by which all others will be judged.

**BARE CHASSIS:** Includes welded bumper-to-bumper 2”x6” frame, body mounts, bumper mounts, exhaust notches, core support, engine mount towers, trans x-member brackets. **$6,375.00**

**CHASSIS WITH SUSPENSION:** Chassis, IFS control arms, 2” dropped Wilwood PRO Spindles, Strange adjustable coil overs, springs, rack & pinion steering, 9” housing, parallel 4-bar tubes, rear mounted panhard bar, adjustable front anti-sway bar **$11,273.00**

**COMPLETE CHASSIS:** Chassis w/suspension, front disc brake kit, SVO rear disc brake kit, Strange Engineering 3rd member, Strange Engineering 31-spline axles **$14,173.00**
1959-64 Chevrolet Chassis

The Perfect Solution For Obtaining An Exceptional Ride, Superior Handling And A Low Stance.

The engineering team at Art Morrison Enterprises has focused their talents on the increasingly popular 1959-64 Chevrolets and developed an innovative chassis that provides a low ride height, great handling and eliminates the need for a pesky 2-piece driveshaft. What's more, this new AME GT Sport chassis features beefy 3x4 main framerails and specially designed crossmembers that provide ample clearance for the exhaust system.

Up front you’ll find AME’s highly acclaimed Sport IFS with its beefy tubular control arms, Strange adjustable coil-over shocks, Wilwood spindles, an adjustable anti-sway bar and a power rack & pinion steering. Motor mounts are available for small block, big block, W block (348-409) and LS-series engines. Transmission mounts can be configured for most any popular automatic or manual shift tranny.

Superior handling—and the ability to handle an abundance of power—is assured through a triangulated 4-bar rear suspension and a beefy 9" rear end. Adjustable coil-overs and an adjustable anti-sway bar provide the desired ride.

Like all other Morrison GT Sport chassis, this new creation for the 1959-64 Chevy is mostly a bolt-in installation and requires minimal floorboard modifications. It will accommodate a wide range of wheel and tire combinations. Pricing and availability later this year.
Destined to become one of the most popular bolt-in chassis modifications of all time, Morrison’s new GT-Sport Front Clip is a “must have” addition to any first generation Camaro/Firebird built to G-machine specs. It also fits 1968-74 Chevy Novas.

Through use of a specially modified C6 spindle with lowered steering arm mounting, the power rack & pinion steering unit is mounted some 2” lower in the frame, which allows for a lower CG and improved handling. Big block, small block and LS-series Chevy engines can be employed, as well as virtually any popular automatic or manual transmission—including Richmond 5/6-speeds, Tremec T56 and TKO, Muncie, Powerglide, TH-350 & 400, 700-R4 and 4L60E—thanks to a series of available mounts.

Designed through use of FEA (finite element analysis) the 105 lb. front clip has outstanding strength and stiffness, yet is significantly lighter than the bulky OEM unit. With a reduced unsprung weight, forged aluminum C6 Corvette control arms, a shortened front view swing arm, modified caster, and adjustable coil-over shocks, Morrison’s GT-Sport clip will provide awesome handling. It comes with a near-stock tread width for optimum wheel fitment opportunities, and can use a wider-than-stock tire (265/35R18 tested).

As no cutting or welding is required, installing a GT-Sport clip can be performed by most competent do-it-yourselfers in the comfort of their own garage. With an aggressive, lower stance and incredible handling characteristics, the look and “feel” of a Morrison GT-Sport Clip-equipped Camaro is unbeatable!

A number of accessories are available to make the installation easier, including body mounts, headers, and a brake line kit.
AMERICAN MOTION ENGINES

**AME GT Sport Rear Subframes**

Two Highly Effective Rear Suspension Setups For 1967-69 Camaros

Improve the handling and ride of any 1st generation Camaros with an expertly engineered Art Morrison GT-sport rear subframe. Rugged 2”x4” mandrel-formed frame rails are far superior to the flimsy OEM stampings and are designed to be used with the stock gas tank.

You have a choice between a highly effective 3-link suspension that employs a special Watts linkage for lateral stability or a compact triangulated 4-bar setup that fits under the stock Camaro floorpan. Both have provisions to locate the exhaust for optimum ground clearance.

Strange Engineering adjustable coil-over shocks are used in both suspension systems, as are a special sway bar. Both come with a 9” rear end housing. Many brake options are available.

**TRIANGULATED 4-BAR PACKAGE**

- 2”x4” Welded Rear Subframe $1,905.00
- 9” Housing with all brackets $970.00
- 4-Bars w/poly rod ends $400.00
- Strange C/O’s w/springs, w/bearings $494.00
- Lwr c/o Mount Kit $40.00
- Sway Bar $280.00
- TOTAL $4,089.00
- Package Discount $175.00
- **Package Price** $3,914.00

**3-LINK PACKAGE**

- 2”x4” Welded Rear Subframe $2,320.00
- 9” Housing with all brackets 1,125.00
- Watts Linkage with poly rod ends $430.00
- 3-Link bars w/johnny joints $480.00
- Strange C/O’s w/springs, w/bearings $494.00
- Lwr c/o Mount Kit $40.00
- Sway Bar $280.00
- TOTAL $5,359.00
- Package Discount $175.00
- **Package Price** $5,184.00

Other products you should consider when installing a GT-Sport subframe

- **Stamped Mini-Tubs**
  - Replace OEM wheel tubs with these 18-gauge stamped steel “deep” units that are 3” wider than stock tubs and can accommodate tires up to 335 wide.

- **4-Point Roll Bar**
  - Specially designed for 1st Generation Camaros, this 4-point roll bar helps stiffen the car for better handling and provides extra protection (not legal for competition).

- **Subframe Connectors**
  - An important addition to any Camaro equipped with AME GT-Sport front and rear subframes, these connectors provide extra stiffening for better all-around performance.

**Stampased Mini Tubs**

Now Standard With Adjustable Swaybars

**As shown**

800-929-7188 • fax: 253-922-8847 • www.artmorrison.com
While our GT Sport chassis are intended to be true bolt-in bumper-to-bumper units, we’ve found that because First Generation Camaros came from two different plants, there was enough variation between cars built in Van Nuys, California and Norwood, Ohio to prevent one frame from fitting all. So we’ve engineered a “3-piece” assembly that allows the builder to position the subframe connectors to best fit the floor pan of each individual vehicle.

We’ve combined a C6 Corvette front suspension and triangulated 4-bar rear to provide optimum handling for 1967-69 Camaros. It can also be fitted with a 3-bar rear suspension and Watts linkage. Both setups have undergone extensive testing by leading enthusiast publications and proven to be exceptionally effective.

With the Morrison GT Sport package you literally have the ability to tightly fit a Camaro body onto this “Frame.” You will have to cut a couple “slots” in the factory floorboard and trim the unibody rear rails out to accommodate the chassis and if you use mini-tubs to handle larger rear tires (up to 335) you’ll have to trim the some of the rear seat frame. Given the variables, please call AME tech personnel for pricing information.

Key Features Of Morrison’s New 3-Piece GT Sport Package

- Designed as a bolt-in/weld-in for 1967-69 Camaros
- Allows use of the OEM fuel tank, rear bench seat and floorboards with minor mods
- Use with small block, big block or LS-series engines; most any manual or automatic trans
- Mandrel-formed 2"x4" subframes fixture-welded by experienced professionals
- C6 Corvette front suspension with forged aluminum control arms
- Triangulated 4-bar rear suspension gives both traction control and lateral stability
- Optional 3-link rear suspension
- Strange Engineering adjustable coil-overs
- Run up to 335 rear tires with mini-tub
- Uses 20:1 power rack steering
Art Morrison Enterprises makes it easy for anyone to adapt contemporary suspension technology to '60s and '70s Muscle Cars with unibody construction. What we’ve done here is essentially build a platform upon which a unibody-type vehicle can be “dropped” on. The floorboard of the host vehicle will need to be removed, and a new one fabricated once the body has been mounted to the frame. But in the grand scheme of things, it’s far easier than dealing with a separate front clip, rear clip and subframe connectors.

The “Max G” chassis is designed to deliver exceptional performance. You have a choice between tubular steel control arms or Corvette C6 forged aluminum A-arms up front, with a triangulated 4-bar assembly in the rear. Strange Engineering adjustable coil-over shock absorbers are used on all four corners, and beefy sway-bars employed to control body lean. The total package has proven to be quite effective, and provides both nimble handling and ground-grabbing traction.

Each of these Max G MuscleCar chassis are CAD-engineered for the specific year, make and model car. They are designed to fit the vehicle in such a manner that the body mounts and core support can easily be fabricated and attached.

If you’re contemplating building a first-class performing Camaro, Challenger, Chevelle, ‘Cuda, Dart, Demon, GTO, Mustang or ???, a Morrison “Max G” chassis is available for the foundation of your project. When you consider performance and overall ease of construction, it’s clearly the way to go!

### Key Features Of Morrison’s “MuscleCar” Max G Chassis

- **CAD-Engineered to fit the exact year, make and model car. No compromises!**
- **Your choice of ride height and stance**
- **Superbly engineered suspension package provides vastly improved handling**
- **Body “drops” on chassis after floorboard has been removed**
- **Mandrel-formed 2”x4” frame fixture-welded by experience professionals**

**Now Available For All Popular Muscle Car Vehicle Applications!**
Sport C6/3-Link Max G Combo Is Perfect For Track Day Builds!

Thanks in part to our new dropped steering arm C6 spindles, we’ve been able to engineer a chassis that brings the C6 front suspension to many platforms. And when combined with the a 3-Link rear suspension utilizing a Watts linkage, the corner-carving capability of cars equipped with a Max G chassis is beyond comprehension. Build your next ride on this platform and it will be difficult to wipe the smile off your face!

The Morrison 3-Link rear suspension comes optionally with “Johnny Joints” while a Watts Linkage does a superior job of controlling lateral housing movement while allowing normal roll.

Morrison has re-engineered the C6 front spindle with a lower steering arm mount. This allows the rack to be mounted lower in the chassis, providing extra engine clearance and a lower center of gravity!

"Builders” and “Bolt-On” Chassis

At Art Morrison Enterprises, we offer two basic types of complete frames; a “Bolt-On” chassis like our “GT Sport” models, or a “Builder’s Platform” that describes our “MaxG” and others. The primary difference is that the “Bolt-On” chassis requires little or no welding. It’s the type of project that a do-it-yourselfer can tackle with confidence. Everything that’s needed to mount the core support, body, bumpers, etc. is welded in place.

The “Builder’s Platform” includes all our bumper-to-bumper 2”x3”, 2”x4”, 4”x4” and 2”x6” frames (MaxG, PROfile, etc.). These do not have the bumper mounts, body mounts, core support, engine and transmission mounts welded in place. This gives builders the maximum amount of leeway when it comes to positioning the engine relative to the firewall, etc. Given the amount of flexibility with the installation, it should be stressed that advanced fabrication skills and solid knowledge are recommended before tackling a project of this magnitude. To aid in the construction of a “Builder’s Platform” chassis, AME offers a wide assortment of mounts and brackets that can be employed.

It’s no wonder that a growing legion of professionals have found Morrison’s “Builder’s Platform” frames the way to go!

One of the FAQs (frequently asked questions) fielded by AME’s tech staff relates to preference between 4-bar and 4-link rear suspensions.

In a nutshell, a 4-link setup is best suited to Drag Race or Pro Street type vehicles where high horsepower engines and large tires are being used. The 4-link can be adjusted easily to compensate for track conditions and control the amount of “hit” the tire takes on the launch. And due to the high kick-up of the frame rails, modifications to the trunk and rear floor are required—often times the rear seat must be removed.

The 4-bar has longer, parallel bars and a lower frame kick-up. It is ideally suited to street and air spring suspension setups, provides more latitude in setting ride height and its polyurethane-bushed rod ends make for a smoother, quieter ride. In most installations the rear seat can be retained, with little or no modifications the seat itself. It’s neat for the street!
Which Rod End is best for my application?

Johnny Joint - Developed by Currie Enterprises and originally made for the 4WD market, the Johnny Joint is a fairly new offering in our suspension lineup. The Johnny Joint is made up of a forged steel body and a heat-treated pivot that is surrounded by polyurethane. Rebuildable and externally greaseable through a zerk fitting, the Johnny Joint is very maintenance friendly. This is a great combination of a high articulation spherical rod end with the harmonic dampening of a poly rod end. Perfect for high performance street and track day vehicles where comfort, strength and performance are a priority. These rod ends fit a lot of different suspension applications. Because of their size they might need some extra clearance for retro-fit applications.

Spherical - Spherical rod ends are specifically used to provide maximum strength for high load applications. Manufactured out of a lot of different materials, the 4130 spherical end is one of the strongest, with the ¾” rod end yielding at 40,572 lbs. Providing a high degree of articulation, they are perfect for a wide variety of suspension applications. Because of their all-metal construction they will transmit road harmonics through the chassis and an audible “clunk” can be heard in the end when they begin to wear out. While they are expensive, the spherical rod end is perfect for racing and all out performance applications where the focus of the build isn’t concerned about maximizing comfort.

Poly - “Poly” rod ends have become the industry standard rod end over the years. Our version of this highly popular end is investment cast from 17-4 Stainless Steel. Inside, is a steel sleeve and two polyurethane bushings. While not a spherical rod end the durometer of the polyurethane allows the bushings to flex and gives the rod ends some rotational movement. It isn’t a lot of movement, but it does allow suspension to articulate through its normal range of movement. When assembled with grease, the poly material can have a long life under normal road conditions. Lubrication also prevents any “squeaking” associated with poly rod ends. They also do a great job of insulating the suspension and vehicle from unwanted road noise. Easily rebuildable, these rod ends can have new bushings installed in a very short time. Because this stainless steel rod end can be disassembled so easily it can be polished for “show car” applications. Intended for street and high performance road applications.

Solid - machined out of heat treated 4140 steel, the solid rod end is one of the strongest available. Yielding at 58,000 lbs of force, it is designed for punishment. The solid rod end is also basic and inexpensive, but because it is a “solid” end, there isn’t any rotational movement available. This also transfers road harmonics and other noise from the suspension directly to the chassis. Because of its limitations, the ladder bar suspension is its only fit. Designed for drag race applications only.
There are several key reasons why convertibles and long-wheelbase cars should use this chassis. In the case of convertibles, they essentially have no structure above the rocker panel and need extra rigidity to support the center of the body. Long-wheelbase cars have a similar issue with chassis flex, due to the torsional action of the stretched frame. To provide owners of convertibles, long wheelbase sedans and hardtops with the best possible ride and handling, the engineering team at Art Morrison Enterprises has developed a specially reinforced chassis that features 4"x4" main rails. This has been accomplished by merging the 2"x4" front subframe with a 4"x4"x .180" wall square tube main rail, resulting in remarkable rigidity in the area where an OEM frame is likely to flex.

Of course, “stance” is all-important with any custom vehicle. And Morrison can engineer the chassis to provide the exact ride height you desire. What’s more, because of the exhaust passages in the frame, it’s possible to have a very low stance, while maintaining ample ground clearance. Lowering the vehicle’s center of gravity also improves handling.

With the frame rails configured to the exact year/make/model vehicle, it’s a fairly straightforward task installing the chassis. The 4"x4" main rail chassis can be designed for use in both “unibody” and full-frame vehicles. Call for details on various suspension options.

### Key Features Of Morrison’s 4x4 Main Rail Chassis

- **CAD-Engineered to fit the exact year, make and model car. No compromises!**
- **Your choice of ride height and stance**
- **Superbly engineered suspension package provides vastly improved handling**
- **Mandrel-formed 2"x4" front profile with a 4"x4"x3/16" main rail**
- **Frame is fixture-welded to assure proper alignment of all suspension components**
- **Choice of AME’s own IFS, C6 Corvette or Air Spring-Plus front suspension**
- **Triangulated 4-bar, 4-bar or Air Spring-Plus rear suspension options**
- **Through-frame passages for 2.5" or 3" exhaust provide lower CG with ample ground clearance**
- **Uses 20:1 Power Rack & Pinion steering**
- **Strange coil-overs on all corners**

**Package Price $10,288.00**
More and more builders are wanting to combine the classic styling of '40s, '50s and '60s pickup trucks with modern driveline and suspension technology. All this, plus an attractive, road-hugging stance.

Art Morrison Enterprises now offers a unique chassis that has an ultra-rigid "backbone" that provides builders with the perfect foundation for any classic truck project.

Morrison engineers started with a big 2"x6" main rail, complimenting it with mandrel-formed 2"x4" front and rear subframes—all fixture welded to assure the perfect alignment of all suspension components.

The chassis also features thru-frame exhaust passages, which allow the truck to have a lower overall stance while still maintaining ample ground clearance. In addition to being designed for the exact year/make/model truck, Morrison can build in the exact ride height desired to obtain a contemporary stance.

There are a variety of suspension options, including Air Spring-Plus or I.F.S. up front and a 4-bar or triangulated 4-bar in the rear (plus Air Spring).

All in all, there is no better frame on the market for Classic Truck applications than Morrison's 2"x6" main rail chassis. It's simply better built for the job at hand.

Contact Morrison's knowledgeable sales staff to discuss which suspension options are best suited to your project.

Key Features Of Morrison's 2x6 Main Rail Pickup Chassis

- CAD-Engineered to fit the exact year, make and model truck. No compromises!
- Your choice of ride height and stance
- Superbly engineered suspension package provides vastly improved handling
- Beefy 2"x6" main rail with precision mandrel-formed 2"x4" subframes 180 wall tubing
- Frame is fixture-welded to assure proper alignment of all suspension components
- Choice of AME's own IFS, Sport IFS or Air Spring-Plus front suspension
- Triangulated 4-bar, 4-bar or Air Spring-Plus rear suspension options
- Through-frame passages for 2.5" or 3" exhaust provide lower CG with ample ground clearance
- Uses 20:1 Power Rack steering
- Several coil-over spring options

Priced from $8,323

*Shown with suspension upgrades

Hefty 2"x6" main rails provide the bridge strength necessary for chassis stiffness.

Welded/Unwelded Frames & Kits

For drag racing and Pro Street applications we offer complete Bumper-To-Bumper frames and subframes made of 2"x3"x.120" wall rectangular tubing. This lighter frame material is ideal for reducing vehicle weight—essential for performance. However, it is highly recommended that a roll cage (see pages 52-54) be integrated into the chassis. We’ve seen builders stuff a blown big block into a lightweight Pro Streeter without the benefit of a cage for chassis stiffening and driver protection.

2"x3" Drag Race/Pro Street Welded Frame

As Shown $2,110

2"x3" Rear Subframe Kit

Ladder Bar and 4-Link As Shown $600

Unwelded 2x4" Rear Subframe Kits

Ladder Bar and 4-Link As Shown $740

4-Bar As Shown $740
Formed Body Mounts

These formed steel mounts are available in 12” & 7.5” overall lengths. Easily trimmed to desired size.

65678020 12” Body Mount (Each) .................................................. $20.00
65678021 7.5” Body Mount (Each) ................................................... 15.00

90° Bends for Special Uses

Builders have asked us to custom make small sections of 90° mandrel bent tubing, and they’ve become so popular we’ve decided to make them a standard catalog item. The “hard way” bends are on the 2” tall section, while the “easy way” is on the wider 4” section.

32347200 (A) 36” Hard-way 2”x4” ................................................. $65.00
32347210 (B) 30” Easy-way 2”x4” ................................................... 60.00
32347215 36” Hard-way 2”x3” ........................................................ 60.00
32347214 36” Easy-way 2”x3” ........................................................ 60.00

Universal Body Mount Kit w/Bushings

65678000 Outrigger Body Mount Kit (6 Sets) ........................................... $95.00
65678001 Outrigger Body Bushing .................................................... 2.50
33340000 Outrigger Body Mount (Each) .............................................. 15.00

2”x4” Crossmember With Loop

Here’s another AME chassis component that builders have asked for individually. It’s an elegant solution for providing the safety of a driveshaft loop with a chassis-stiffening crossmember.

33330131 2”x4” Crossmember with Center Donut .............................. $245.00
33330132 2”x4” Crossmember with Offset Donut ............................... 245.00
33330133 2”x4” Crossmember with Donut Unwelded .......................... 160.00
33330140 2”x4” Crossmember with Center Donut w/Exhaust 2-1/2” ... 340.00
33330142 2”x4” Crossmember with Center Donut w/Exhaust 3” ........... 405.00

Center Frame Kit Unwelded

One of the more significant features of the Morrison GT Sport chassis has been the center frame treatment and routing the exhaust through passages in the crossmember. This allows for a lower stance, without having to worry about mufflers and pipes hanging below the bottom of the frame. Because of the popular acceptance of this feature and request from builders, we have developed a special kit that allows a constructor to easily adapt this design to other chassis. Components are mandrel-formed out of 2”x4” rectangular tubing (.120” wall) and kits are offered with or without the exhaust tubes.

32347100 Center Frame Kit ............................................................ $340.00
32347101 Center Frame Kit without Exhaust Tubes ........................... 295.00
32347102 Center Frame Kit with 3” Exhaust ...................................... 390.00
Art Morrison Enterprises offers the industry’s widest selection of front and rear suspensions, including air, coil-over and strut front setups and air or coil-overs for the rear. This ensures that you can obtain the best possible combination of performance and comfort for your particular vehicle. You should know that all Morrison suspension systems have been carefully computer-engineered to assure optimum operational efficiency—with the front suspensions designed for “0” bump steer. These suspensions are available on bumper-to-bumper chassis, or subframe assemblies. Further options on rear suspensions include a choice between Morrison’s polyurethane-bushed stainless steel rod ends for quieter, softer street use or spherical bearings for more rigid and precise competition applications. With no less than nine different front and rear suspension options, it’s clear that nobody gives you more choices than Art Morrison! Call our tech staff for input on what’s best for your application.

3-Link Rear Clip

Package As Shown
$5,133

NOTE: Subframe can be ordered with optional 3" exhaust ports

Engineered To Fit Your Application

The engineering staff at Art Morrison Enterprises has developed this new 3-Link Rear Suspension Clip that is designed to improve the handling and performance in a wide variety of street machines and muscle cars. Of course, each subframe is CAD-designed for the particular year/make/model vehicle—including the desired ride height—to provide optimum ease of installation.

From a technical standpoint, the 3-Link configuration—in concert with a Watts-type linkage—provides complete multi-axis control. Add the Strange Engineering adjustable coil-over shocks and a sway bar to the 3-Link package, accounting for optimum compression/rebound and roll control.

The rugged 2”x4” rectangular steel tube frame rails and crossmembers are precisely mandrel-formed, and the assembly fixture-welded to assure correct alignment of all suspension components. Optional 3” exhaust ports can be installed in the front crossmember, enabling the vehicle to have a lower stance without compromising ground clearance.

A specially-modified 9" Ford rear housing is also part of the package. It’s fitted with mounts for the Watts linkage, coil-over shocks and link bars. The bars feature Morrison’s poly-bushed stainless steel rod ends, which provide firm control and quiet operation. For all-out competition, a spherical rod end package is available. Of course, axles, brakes and complete 3rd members are available from AME to complete the installation.

*This kit comes in welded form only
Triangulated 4-Bar Suspensions

**Tri 4-Bar Rear Clip**

For the growing numbers of street rodders who appreciate good handling, Art Morrison has developed the triangulated 4-bar rear suspension, now used in the Max G and Tri-5 chassis. The crossmember has passages for the exhaust and for the driveshaft for a low center of gravity and improved handling. The suspension setup controls both housing “twist” and lateral movement. The “big tube” 1-3/8” diameter bars feature Morrison poly-bushed stainless steel rod ends. The rear sway-bar, coil-over shocks, and 9” housing complete the package.

**Tri 4-Bar Kit**

There’s no doubt that this is the most versatile setup for both street rods and GT-type cars as it provides excellent rear end control in both acceleration and handling situations due to stabilizing both housing rotation and side loading. It’s been proven highly effective in tests conducted by leading automotive enthusiast publications. The kit contains four bars with AME polyurethane-bushed stainless steel rod ends, plus all required mounting brackets and hardware. Kit also available with a sway-bar to provide extra control over body roll.

| Tri 4-Bar Kit Without Sway-Bar                        | $520.00   |
| Tri 4-Bar Kit With Adjustable Sway-Bar                | $800.00   |

**Tri 4-Bar Suspension**

Now it’s easy to install a modern Triangulated 4-Bar rear suspension in most any chassis with this convenient package. It contains an AME Triangulated 4-Bar kit, sway bar, Aldan coil-over springs, shock mounts and hardware.

4-Bar Clip Package

For many applications, the 4-bar suspension is preferred. Operating on the principle of a “constant motion parallelogram,” the design of the 4-bar is such that the rear end housing is always perpendicular to the ground—pinion angle never changes. This, combined with the lateral stability of the Panhard Bar, does an excellent job of locating the rear end and keeping it in proper alignment.

You will note that the rear frame “kick up” of the 4-bar setup is far less severe than what is required for a 4-link or ladder bar suspension. This is beneficial for many street applications, where interior and trunk space is at a premium. Likewise, use of a 4-bar setup in a pickup truck will minimize the area wheel tubs encroach into the bed. It’s the hot setup for a low profile!

Morrison’s complete 4-bar clip assemblies include a 2”x4” rectangular tube rear subframe that is CAD-engineered for the applications. Each is designed for the year/make/model vehicle to assure a correct fit and make for the optimum ease of installation. Moreover, each subframe is precision fixture-welded by expert technicians to assure the proper alignment of chassis and suspension components.

The husky 2”x4”x.120” wall rectangular tubing is mandrel-bent to assure a superb finish and “show quality” bends. The assembly comes with a driveshaft hoop and all suspension brackets. The 4-bar setup features Morrison’s highly regarded polyurethane-bushed stainless steel rod ends and coil springs rate-matched to the application and coil-over shock absorbers.

Complete 9” rear end assemblies are also available. Don’t forget to ask your friendly Morrison salesman for extra savings when ordering parts.
For those applications where the builder wishes to adapt a Morrison Air Spring+Plus™ suspension to an existing chassis, special rear subframe assemblies are available. Like all other Morrison frame components, the subframes are individually CAD-engineered for the exact year/make/model vehicle and the rails are mandrel-bent to form “show quality” bends.

The subframes are made of 2”x4”x .120” wall rectangular tubing, and fixture-welded by Morrison’s staff of experienced craftsmen to assure proper alignment of critical suspension components.

Air Spring+Plus™ suspension packages are available individually for rear subframes. It pays to buy necessary related items at the same time.

The rear subframe package shown at above right has a fixture-weld clip, 4-bar rear suspension, Air Springs, shocks, Panhard Bar and narrowed 9” rear end.

Air Spring+Plus™ Rear Clip

As Shown $3,233

Big Tubes Now Standard

Air Spring+Plus™

4-Bar Suspension

Now you can enjoy the benefits of an air spring suspension and 4-bar housing control with these handy packages from Art Morrison Enterprises. You’ll weld the innovative rear brackets (which also serve to mount the bottom of the air spring and locate the suspension bars) to the rear end housing, attach the 4-bar front brackets to a crossmember, and affix the top air bag mount to your frame or supplied crossmember (“Big Bag” kit). The “Standard” kit is ideally suited to most compact and intermediate-sized vehicles, while the “Big Bag” kit is designed for use on heavier cars and trucks. The primary differences between the two kits are the use of hefty 2,000 lbs. rated air bags and heavy-duty brackets. These combine to provide the extra capacity required for long-term reliability. The kits contain premium quality Firestone air bags, 4-bars bars equipped with AME’s own polyurethane-bushed stainless steel rod ends, mounting brackets and all required hardware. Replace the coil or leaf spring setup on your car or truck with an Art Morrison Air Spring+Plus suspension for a better ride and the ability to easily adjust ride height at the flick of a switch.

We also manufacture Air Spring-Plus front subframes so you can easily convert the vehicle over to an all-air suspension for a great ride with complete adjustability. See page 41.
Art Morrison’s 4-link rear suspensions are perfect for competition or street applications where maximum adjustability is desired. There are six upper bar front mounts plus four lower bar attachment holes, along with two top and bottom housing mounts and adjustable bars to provide you with any “instant center” point desired.

The link tubes are 1-3/8” chrome-moly with threaded tube adapters for maximum strength. Mounting plates are made of 3/16” steel and of a double sheer, 360° design.

We also offer a “Big Tube” unwelded kit, which also features large diameter .095” wall tubing.

You have a choice between three rod end packages. For street applications our special polyurethane-bushed 17-4 stainless steel rod ends are utilized. They are exceptionally rugged, and provide the necessary quietness for street operation. For racing, our popular “4/4” kit consists of four 4130 chrome moly and four commercial grade rod ends, while for maximum reliability we offer all 4130 rod ends.

Most of our 4-links are sold in complete rear suspension packages. They include the 4-link with frame and housing brackets, coil-over rear shocks with springs rate-matched to your application and a choice of a Panhard Bar (for street use) or diagonal link (race).

### Package Prices

- 4-link with Poly-bushed Stainless Rod Ends and Coil-Over Shocks, Panhard Bar $1,065.00
- 4-link with Four Commercial & Four 4130 Rod Ends, Coil-Over Shocks & Diag. Link $1,020.00
- 4-link with all 4130 Rod Ends, Rate-Matched Coil-Over Shocks and Diagonal Link $1,100.00

You can also purchase the basic 4-link kit by itself plus three variations of rod end packages (poly-bushed, four commercial and four 4130 or all four 4130 rod ends).
Morrison makes it easy to install narrowed rear end and wide tires with this factory-welded Ladder Bar rear suspension subframe assembly. The “clip” includes mandrel-bent rear frame rails, cross-members and suspension mounts. Each clip is assembled on a special fixture to assure proper alignment and welded by certified professionals. Most importantly, each “clip” is custom designed and built for the intended application using contemporary CAD technology. This assures a perfect fit and eliminates the extra fabrication required to install “universal” type assemblies as sold by our competition.

Over the years Art Morrison Enterprises has designed and built rear suspension clips for a wide variety of vehicles. Dozens and dozens of popular applications (and some quite unusual) are maintained in Morrison’s data server, and can be promptly accessed to initiate building a subframe assembly. The “clip” includes a perfect fit and eliminates the extra fabrication required to install “universal” type assemblies as sold by our competition.

For a racing or “Pro Street” application you’ll probably want to go with the 2”x3” clip. It’s a third lighter than the beefier 2”x4” models, and provides all the rigidity you’ll need when roll cages and subframe connectors are employed. As a rule of thumb, the more rigid the chassis, the better it will work. The 2”x4” clips are perfect for use in street rod and truck applications, where roll bars and cages are not typically used. Here, the extra strength of the larger frame rails come into play.

The Competition Package includes 4140 solid rod ends and diagonal link kit. Prices start at $690.00.

Our Street Package uses poly-bushed stainless rod ends for a quieter ride and a stainless rod ends for a quieter ride and a solid 4140 and Poly Rod Ends.

DeLuxe Double Adjustable Ladder Bars

Morrison Double Adjustable Ladder Bars are made from only the finest quality 1” O.D.x.156” wall D.O.M. seamless carbon steel tubing; rated at 80,000 psi tensile strength. Our list of features speak for themselves.

Our Ladder Bars are available in 30” and 32” lengths, measured from centerline of front pivot to centerline of axle housing. We offer our Ladder Bars bare or with combinations of standard 4140 solid rod ends, polyurethane-bushed stainless steel rod ends, or heavy-duty 4130 rod ends.

The Morrison “double adjustable” bars have a quick-adjust mechanism on the lower bar.
Rear End Housing Lateral Control

Panhard Bar Kits

Here’s just what the doctor ordered for those situations where a rear end housing is out of the vehicle and being modified. This weld-on Panhard Bar kit includes tower mounts for the rear end housing and frame. The bar is fitted with polyurethane-bushed stainless steel rod ends.

12120327 (A) Weld-In Panhard Bar Kit.......................................................... $105.00

Also available is a bolt-on Panhard Bar kit that attaches to a 9” housing with the 3rd member bolts. Chassis brackets are welded on. Includes all required hardware.

12120527 (B) Bolt-In Panhard Bar Kit (Attaches to Rear End Gasket Flng).... $145.00

$155

Diagonal Link Kits

Morrison also manufactures a wide variety of diagonal link kits. They are available in both weld-in and bolt-on styles. Right hand/left hand rod ends provide easy adjustment. Your choice of 30” or 36” long links. Complete with all required hardware.

12120030 Weld-in Diagonal Link Kit, 30”.............................................................. $70.00
12120036 Weld-in Diagonal Link Kit, 36”.............................................................. 70.00
12120430 Bolt-in Diagonal Link Kit, 30”.............................................................. 80.00
12120436 Bolt-in Diagonal Link Kit, 36”.............................................................. 80.00

$260

Rear Wishbone Kits

For those competitors who wish to accurately position their rear-end housings, Morrison wishbones offer the ultimate in adjusting convenience. They are available made of 4130 chrome-moly tubing.

12120705 Rear Wishbone with 4130 Tubing.................................................... 260.00
Art Morrison Enterprises offers the industry’s widest selection of front and rear suspensions, including air, coil-over and strut front setups and air or coil-overs for the rear. This ensures that you can obtain the best possible combination of performance and comfort for your particular vehicle. You should know that all Morrison suspension systems have been carefully computer-engineered to assure optimum operational efficiency—with the front suspensions designed for “0” bump steer. These suspensions are available on bumper-to-bumper chassis, or subframe assemblies. The newest addition to the AME lineup, our exclusive Sport IFS front end, is designed for serious cornering, as is the C6 Corvette-based suspension. All Morrison front clips are CAD-engineered for the exact year/make/model vehicle and are custom made to your requirements.

Morrison has created the “ultimate” I.F.S. (Independent Front Suspension) for the serious street enthusiast. Design features include beefy control arms, Aldan or Strange adjustable poly bushed coil-over shock absorbers with urethane bushed mounts and sculptured towers. Its attractive styling makes it a handsome addition to any street rod.

Most importantly, the geometry for the Morrison DeLuxe I.F.S. has been perfected through computer analysis and engineered for “0” bump steer. It provides you with excellent vehicle control, as well as a superb, comfortable ride under a wide range of road conditions.

The heavy-duty control arms are made from beefy 7/8” o.d. (upper) and 1-1/8” o.d. (lower) tubing, and available with chrome plating for lasting durability and exceptional good-looks.

Complete weld-in assemblies including 2"x4" subframe, power rack, tie rod ends, spindles, unplated upper & lower A-arm kits, sway bar and Strange coil-overs package priced at $3,884.00; with polished chrome upper & lower A-arms $4,384.00. Brakes not included in package, see below.

AME Sport I.F.S.

Engineered For Those Who Are Serious About Corners!

While the tried and true AME IFS has proven its merit on many a winding road and test track, there are those who want to push the envelope farther. So for the serious corner carver, we’ve developed the AME Sport IFS.

The most visible difference is the use of large tube control arms, going from the 7/8” OD upper used the standard IFS to 1” diameter. This provides additional stiffness without any appreciable weight penalty (it’s much lighter than any OEM A-arm) and is designed to allow use of large front tires. Larger polyurethane bushings are also employed, which serve to reduce noise and vibration while minimizing flex.

What’s not readily visible are numerous enhancements to the suspension geometry that are engineered for more aggressive driving. For example, anti-dive is set to minimize nose-diving during hard braking, caster is increased for more stable highway manners, and camber gain has been optimized to utilize more of the tire’s footprint in contact with the pavement for improved stopping. Roll center movement is less than 3” laterally, which provides confident transitional handling comparable to contemporary high performance vehicles.

Clearly, the AME Sport IFS is ideally suited to high performance G-Machines that are “Track Day” worthy.

For more details, including adaptability to various applications and pricing info, call AME’s tech staff for personalized assistance.
Air Spring Front Clip Package

For those applications where the builder wishes to adapt a Morrison Air Spring+Plus™ suspension to an existing chassis, special front subframe assemblies are available. Like all other Morrison frame components, the subframes are individually CAD-engineered for the year/make/model vehicle and the rails are mandrel-bent to form “show quality” bends.

The subframes are made of 2”x4”x .120” wall rectangular tubing, and fixture-welded by Morrison’s staff of experienced craftsmen to assure proper alignment of critical suspension components. Air Spring+Plus™ suspension packages are available individually for front subframes. The air springs, hoses, fittings, air pump, storage tank and dash-mount control panel (single switch) come as a package, while the front suspension—control arms, sway-bar, and shocks. It pays to buy necessary related items at the same time.

Our typical air front clip package, shown above for $4,098.00, contains a custom CAD-designed 2”x4” firewall-forward subframe, tubular control arms with Air Spring+ mounts, shock absorbers, sway-bar, DSE Power rack, spindles, and springs.

AIR2100 Factory-Welded 2”x4” Front Subframe “Clip” for Air Spring+Plus™ Suspension.................. $1,660.00
86835210 Wilwood Pro Spindles .................. 325.00
86835120 Flaming River Rack (manual) ........ 275.00
86835090 DSE Power Rack .................. 550.00

Now with Wilwood Spindles
Truck Front & Rear Suspension Kits

You can update the chassis of your 1947-53 Chevrolet pickup in logical stages through the use of these kits offered by AME. This is especially beneficial for builders on a budget, as the chassis modifications can be made in sequence with minimum “down time.” You won’t have to remove the body from the OEM frame. It’s the easy way to enjoy improved handling and ride with your classic pickup truck!

Build It In Stages!

1 FRONT CROSSMEMBER KIT
Designed to be “spliced” into a stock 1947-53 Chevy truck chassis, the kit consists of a front crossmember that contains steering, lower control arm and motor mounts, upper control arm/coil-over mounts, tubular upper and lower control arms, ball joints, spindles, adjustable anti-sway bar, Strange adjustable coil-over shocks, and a power rack & pinion steering. Plates are employed to “box” the frame and support the crossmember. The assembly is CAD engineered for the application and provides contemporary handling and ride.

2 BRAKE PEDAL KIT
An elegant solution for adapting a Wilwood master cylinder and proportioning valve to your 1947-53 Chevrolet truck. The assembly features an precisely engineered bracket for the pedal (with a stop), master cylinder and proportioning valve and uses the original floorboard opening. The mounting plate can be bolted into position or welded. It also serves to stiffen the frame. Also available with a clutch pedal for stick shifts.

3 REAR SUSPENSION KIT
Adapting a hefty 9” rear end housing and 4-bar rear suspension to your 1947-53 Chevy truck is easy with this superbly engineered kit from AME. It starts with a 2x6 crossmember that includes mounting brackets for the four bars (which have poly-bushed stainless steel rod ends). A tubular crossmember, with upper coil-over mounts, is attached to the frame using four brackets that also serve to reinforce the rails. The 9” housing is made to your desired width and fitted with mounts for the coil-overs and 4-bar suspension. Strange adjustable coil-over shocks and a lateral stabilizer bar (with mount) complete the package.
Weld-In I.F.S. Kits

It's easy to gain the benefits of an independent front suspension with this convenient weld-in kit. It contains a mandrel-formed 2"x4" rectangular steel crossmember with fixture-welded steering (use Maval rack) and lower control arm attachments, upper mounts, tubular control arms, ball joints, linkage and all required hardware. The IFS is designed to accommodate Wilwood spindles. Aldan or Strange coil-over shocks can be used with this setup. The kit is engineered to fit stock frame rails and can be installed by do-it-yourself home builders.

AME Weld-In Crossmembers Available In Six Popular Widths

Art Morrison Enterprises offers weld-in front crossmembers in a variety of widths. To determine which is best suited to your car or truck, you’ll need to determine the distance from the outside of the right frame rail to the outside of the left frame rail. This distance is shown on the left side of the adjacent chart. On the right side of the chart you’ll see the track width for the corresponding assembly. Track width is determined from hub-to-hub. Please also consider wheel size and offset when determining width.

As Shown
$1,455

As Shown
$3,034
Many builders don’t want to deal with taking a body completely off the frame, or simply prefer to do the chassis modifications on a smaller scale. That’s why Art Morrison Enterprises has developed the “knock-down frame package.” You can adapt these sections to your existing frame one by one and ultimately enjoy the benefits of a contemporary suspension. Get improved handling and a better ride in three easy stages.

Please note that the Center Support and Tri 4-Bar rear are designed to use a through-frame exhaust system. This will allow you to have a lower stance while providing ample ground clearance. All in all, this is the best way for many builders to go about constructing a first class ride.

Eric Brockmeyer used a custom front clip to nail the stance on his 1962 Rambler American sedan.

1 TRI 4-BAR REAR
Our triangulated 4-bar rear suspension can easily be adapted to most vehicles and provide outstanding acceleration and lateral control. The kit includes the poly-bushed link bars, crossmember, 4-bar mounts for the rear end housing and frame, shock mounts, sway bar and coil-over shocks.

2 CENTER SUPPORT
Here’s the easy way to stiffen your chassis for improved handling while providing convenient through-frame routing for the exhaust. This facilitates a lower stance without worrying about mufflers hanging below the frame. The mandrel-formed 2”x4” tubes can easily be trimmed to fit most any frame.

3 BIKINI CLIP
Remove the front crossmember section of your frame and insert an AME “Bikini clip” just behind the OEM core support and in front of the kick-up. Your choice of an IFS with coil-overs or an Air Spring-Plus suspension. CAD engineered to fit your application. Clip and suspension available separately.

Front Bikini Clip .................................... $3,524.00
Center Frame Kit w/3" Exhaust ............ 390.00
2”x4” Xmbr w/Donut w/3" Exhaust ....... 405.00
Tri 4-Bar Suspension Pkg .................. 1,475.00
TOTAL ........................................ 5,794.00
Package Discount .............................. 250.00
Package Price ................................. $5,544.00

For many applications, employing an Art Morrison “Bikini Clip” represents the easiest way to adapt a contemporary front suspension and power steering to an older car. The “Bikini Clip” is designed to be spliced into a section of the host frame, and not disturb key elements of the OEM chassis. You can save money with AME’s package price, or buy the components on an individual basis.

As Shown $5,544

2x4 Knock-Down Frame Package

Start With A Fully-Welded Bikini Clip Package

As Shown $3,399

Eric Brockmeyer used a custom front clip to nail the stance on his 1962 Rambler American sedan.
Strange Engineering Coil-Over Shocks

Strange aluminum adjustable coil-over shocks are designed to take the guesswork out of tuning your suspension. Whether you are adjusting the ride of your street machine or fine-tuning a drag race vehicle, Strange shocks are a valuable tool to adapt your suspension to the changing conditions your vehicle will encounter. Proven to be exceptionally effective and reliable on our own “Project GT55” Chevy…which has recorded some remarkable skid pad, slalom and acceleration numbers.

Strange Engineering single adj. Coil-Over shocks w/springs available from (pr) $480.00
Strange Engineering double adj. Coil-Over shocks w/springs available from (pr) $700.00

AME Street & Competition Coil-Overs

Art Morrison Enterprises’ own coil-over shocks represent one of the best suspension values in the industry. These highly effective units feature a 3-position Gabriel shock that is fitted to a unique spanner-adjustable base with your choice of polyurethane bushings or spherical bearings.

The poly-bushed “Street” units provide quiet operation, as there is no metal-to-metal contact as you get with “Competition” style coil-overs equipped with spherical bearings. The “Competition” units provide more positive control than the more flexible poly-bushed units.

Both types are shipped with coil springs that are rate-matched for your vehicle. All are priced at $240.00 (pair), and include special mounting tabs.

To make installation of these coil-overs easy, use Morrison’s handy Shock Jigs. See page 47 for details.

Morrison Rear Spring Kit Assemblies

They are approved by NHRA and IHRA for use in S/S as a legal replacement (for cars originally equipped with coil springs). “Traction Tuned” package includes coil springs rate-matched for the application and 3-position adjustable shocks. They provide up to 4” of ride height adjustability, and the mounts are contoured to fit 3” housing tubes. An AME innovation. $190 (pair)
JRi Shocks is proud to introduce their new Patent Pending Hydraulic Ride Height System. Unlike typical systems that operate with air, JRi’s Ride Height System is 100% hydraulic, working directly upon the coilover spring. It features 2” of ride height adjustment all while retaining the ride and performance benefits of a coilover shock.

Traditional air ride systems are sufficient for lowering your car for a show but come with several deficiencies; air is inconsistent, it changes dramatically with temperature and elevation thus affecting handling and performance. Over time, seals will weather and eventually leak leading to decreased performance.

The state of the art JRi Ride Height System uses a coilover spring with a hydraulic weight jacker allowing you to raise and lower your vehicle instantly by way of a hydraulic pump. Combining the Ride Height control you want with the performance of the ultimate shock absorber gives you the whole package; performance, ride quality and ride height.

JRi Shocks

We are always on the lookout for new products that will improve performance, and we’ve found it with JRi shocks. The company has taken shock absorber technology to the next level from both a design and manufacturing standpoint.

For example, the shafts are REM finished to provide a low friction, high pressure seal, which results in more stable tire contact. A “floating” seal/bearing head neutralizes side loading to the shaft that is common to coil-over applications, with the energy dissipated through the fluid and not the friction of components. The design and function of the main piston and shim allows the shock to stay more closely in phase with the varying frequencies created by the tire and provide more consistent damping. And there’s more.

You should also know that many of the nation’s leading race teams have switched to JRi shocks. These range from NASCAR, NHRA and SCCA champions to Formula Drift standout Vaughn Gittin, Jr., whose awesome Mustang was on our last cover.

We carry a variety of JRi shocks to suit your application and budget. These include non-adjustable, single, double, triple and quadruple adjustable units. JRi is also developing non-adjustable units specifically for our various GT Sport chassis packages that will provide awesome handling and no-hassle convenience. Call for tech details and pricing information on the JRi line.
9" Rear End Housings

The 9" rear end housing has become a “standard” in world of high performance. Its beefy 9" diameter ring gear has proven to be capable of handling even supercharged engines with outstanding reliability. What’s more, there are more rear end gear sets made for the 9" than any other differential, with ratios from 2.63 to 6.50 available. As such, the 9" can be used in everything from street rods to all-out competition vehicles.

Art Morrison Ent. has made a “science” of preparing 9" housings to fit your needs. We have developed special fixtures that allow our technicians to hold all components in correct alignment when fitting the housings with new tubes and billet housing ends. Subsequently each unit is narrowed to your requirements and equipped with all required suspension brackets and other options, such as a reinforcing brace, filler bung, etc. Some of our most popular setups are listed below. Call for details on other combinations.

Street or Competition Big Web 9", narrowed to your specs and equipped with choice of rear end housing end bolt pattern, filler bung & all required suspension brackets... $935.00
Super Clip 9", narrowed as required, fitted with 1-piece back brace, suspension brackets, lateral supports, filler.............................................................. 1305.00

**Ladder Bar Replacement Parts**

A complete assortment of premium quality components are available to facilitate ladder bar installations and upgrades.

10851710 (A) Ladder Bar Housing Plates, 5/8" Holes (4) .......................... $40.00
10851800 (B) Ladder Bar 360° Front Brace Kit .................. 30.00
10851900 (C) Ladder Bar Adjuster Kit ................................ 50.00
11852010 Crossmember Bare Tube ............................................. 40.00
11852100 Ladder Bar Front Mounting Plates, 5/8" Holes (4) .......... 40.00
11852210 Ladder Bar Front Mount Plates, 2" x 3" ................... 40.00

**Coil Spring & Shock Absorber Bearings**

Install these spring bearings under each spring for adjusting ride height easily. Rollertype bearings permit adjuster to turn freely by eliminating spring friction.

18164400 Spring Bearing Kit Poly (Pr) ..................................... $14.00
18166100 Shock Bearing Kit (brg. or poly - pair) ................... $50.00
18166200 Snap Rings (8) ......................................................... $5.50

**Rear Coil-Over Springs**

Use these fixed rate or variable rate springs to "dial in" a race car's suspension for improved traction. Available in six increments from 80# to 200# or 160-250# variable rate spring that gets stiffer as the spring compresses.

16163000 80# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00
16163100 95# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00
16163200 110# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00
16163300 150# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00
16163400 200# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00
16163700 250# Fixed Rate 2-1/2" I.D.x12" Rear Springs (Pair) ............ $110.00

**Shock Jigs Kits**

These handy new devices from Art Morrison make it easy to install a rear end housing in the correct position for your desired ride height. The Jigs can be set for the compressed height of the coil-over, and shock mounts positioned accordingly. Models are available to simulate both spherical bearing end and standard shaft-type shocks. The shock jigs are shown with Morrison coil spring mounts for illustrative purposes. $25.00

**AME Front Springs**

Specifically designed for use on Morrison chassis, subframes and struts assemblies. Five different rates to choose from. NOTE: AME carries a wide range of springs for numerous applications. Please call our sales/tech dept. for info on other spring rates not listed.

16161805 170# Fixed Rate 2-1/2" I.D.x10" Springs (Pr) ................ $110.00
16161815 250# Fixed Rate 2-1/2" I.D.x10" Springs (Pr) ............... $110.00
16161820 350# Fixed Rate 2-1/2" I.D.x10" Springs (Pr) ............... $110.00
16161855 550# Fixed Rate 2-1/2" I.D.x10" Springs (Pr) ............... $110.00
16161865 650# Fixed Rate 2-1/2" I.D.x10" Springs (Pr) ............... $110.00

**AME Rear Spring Kit**

Morrison rear spring kits (#18180000) require a larger spring than AME coil-overs. They are available in six different rates, and are priced per pair.

16182000 90# Fixed Rate 3" I.D.x14" Springs ..................................... $100.00
16182500 110# Fixed Rate 3" I.D.x14" Springs ..................................... $100.00
16183000 130# Fixed Rate 3" I.D.x14" Springs ..................................... $100.00
16183400 145# Fixed Rate 3" I.D.x14" Springs ..................................... $110.00
16183500 165# Fixed Rate 3" I.D.x14" Springs ..................................... $110.00
16184000 200# Fixed Rate 3" I.D.x14" Springs ..................................... $110.00

**Replacement Shocks for AME Rear Spring Kits and Coil-Overs**

These are replacement shock absorbers for Gabriel-based Morrison coil spring kits. The Gabriel shocks are of the heavy-duty Strider variety sporting 3 valve positions to allow ride adjustability. A companion to Morrison coil-over springs shown at the top of this page. Sold individually, $40.00
“Tee” Bolt Kit
Secure backing plate to housing or spindle flange with these premium quality “Tee” bolts. Includes bolts and aircraft style lock nuts.
40401030 3/8” (Set of 8) ....................... $40.00
40401020 1/2” (Set of 8) .......................$50.00

Housing Breather Kit
Eliminate those pesky leaks that 9” housings are known for. This “catch can” mounts above the housing. Excess pressurized gear oil goes to the tank, is vented, and the oil drains back after parking.
40403020 Housing Breather Vent for Hose ........ $15.00
40403030 Housing Vent Tank .................. $45.00

1-Piece Mandrel Bent Housing Back Brace
Designed for any rear end that will be subjected to severe shock loads. Not only will the brace help maintain a straight housing, but it will facilitate increased bearing life. Made from a single mandrel-bent piece of tubing to ensure optimum structural integrity. Should be installed during or before narrowing the rear end to ensure proper axle alignment. Available for 9” and 8-3/4” Mopar applications. $75.00

2-Piece Back Brace For Hot Rod Housing
Designed for those who wish to strengthen a small web 9” Ford or 8-3/4” Mopar housing and improve its looks, AME’s back brace kits consists of two formed and sculpted sections that you weld onto the housing $75.00

H-D Axle Bearings
H-D ball-style axle bearings are pre-lubed & sealed for easy installation and long life. Mopar bearings fit 8-3/4” & Dana 60 applications and eliminate need for pre-load adjustment. From $40.00 ea.
(A) 46460125 Set 20, 1.562” ..................... $45.00
(B) 46460130 Small Ford Conv ..................45.00
(C) 46460300 57-’64 BOP .......................45.00
(D) 46460120 1.562” Ball Bearing ...............45.00
(E) 46460110 1.772” Ball Bearing ...............45.00
(F) 46460000 Mopar w/Retainer ...............50.00

Leaf Spring Mounts
Use our universal housing mount pads when installing a new rear end in your leaf spring car. Fits 2-1/2” wide springs. $20.00 per pr.

Strange Engineering Thirdmembers
Strange 9” S-Series Iron center section fully assembled with posi-unit, Daytona iron pinion support, 3.00-6.50 Strange standard gear set and S-Series steel (1350) yoke. Call for options & other 3rd member choices. From $1,225.00

Wheel Spacers
Installing wider tires and wheels can often lead to clearance problems. Solve them with our aluminum spacers (5-on 4-1/2”, 4-3/4” & 5”).
54020500 1/8” W 7/16” Holes, Each ...............$18.00
54020510 1/8” W 1/2” Holes, Each ...............18.00
54020520 1/4” W 7/16” Holes, Each ...............22.00
54020530 1/4” W 1/2” Holes, Each ...............22.00
54020540 1/2” W 7/16” Holes, Each ...............30.00
54020550 1/2” W 1/2” Holes, Each ...............30.00

Strange Engineering Thirdmembers
Strange 9” S-Series Iron center section fully assembled with posi-unit, Daytona iron pinion support, 3.00-6.50 Strange standard gear set and S-Series steel (1350) yoke. Call for options & other 3rd member choices. From $1,225.00

Carrier Installation Kit
Here's just what the doctor ordered to do a first class job of installing a 9” carrier in the rear end housing. Included in the kit is a special high performance gasket, plus premium grade bolts, nuts and lock washers. Pesky leaks will be a thing of the past when you use this special kit.
40401015 Carrier Installation Kit .................. $30.00

MORRISON

800-929-7188 • fax: 253-922-8847 • www.artmorrison.com
**Bearing Retainers**

An ideal replacement for stock-type units, our bearing retainers offer substantially greater strength and ease of installation/removal. Made from 3/16” steel. They are available for the most popular applications. Please call for details regarding your housing. $30.00 pair

**Housing Ends**

We offer a complete selection of housing ends for all applications. Please refer to the handy reference chart below to assist you in identifying housing flanges. They include our own Morrison CNC-machined billet steel ends (as pictured above).

Billet Housing Ends for 9”......................... $100.00

**Caps and Plugs**

Finish off your rear end housing or tank with these handy filler cap and bung assemblies. The cap is aluminum while the bung, flange and pipe plug are made of steel.

92851300 Rear End Filler Cap & Bung (A)......... $34.00
92851600 1/2” Flange & Pipe Plug Set (B)........ 10.00

**Strange Engineering Axles**

Strange Engineering Hi-Tuff forged steel axles and spools are the answer for reliability on the drag strip. They are available custom-made in any length, spline and bolt pattern, with a 2-year warranty on 33 or more splined axles. Companion spools available. For street applications, we also offer Strange’s popular new “S/S” (31-spline) and “S/T” (35-spline) induction hardened axles.

Hi-Tuff Race Axles (to 35-spline) S/S Street Axles (31-spline) Pair.................. $325.00
Pair.................................. call for pricing S/T Street Axles (35-spline) Pair........ 325.00

NOTE: Strange 40-spline racing axles and spools are also available. Please call for pricing information.

**Wilwood & SVO Rear Disc Brake Kits With Parking Brakes & Drum Brakes**

**Wilwood “Big Brake” Kit**

Superior stopping power is assured through use of the Wilwood “Big Brake” kit, which features 4 piston caliper with a drum-style parking brake. Choice of 13” or 14” rotors 13” priced from $1,505.00 14” priced from $1,630.00

**Dynalite Pro w/Internal Park**

Wilwood’s highly regarded Forged Dynalite 4 piston disk brake with an effective “in the hat” internal shoe parking brake assembly. From $655.00.

**Drum Brake Kit**

Our rear drum brake kit for 5-on 4-1/2” or 4-3/4” bolt circle patterns comes with fully assembled backing plates. Fits 9” Ford housing with big ends. Includes new drums, 11”x2-1/2” shoes, wheel cylinders & hardware. $560.00

**SVO Rear Disc Kit w/E-Brake**

Kit features heavy-duty 11” rotor rear disc brakes, and inside the “hat” resides a highly effective drum brake. Complete kit from $540.00
H-D Pro Series Front Kits

For vehicles weighing over 2800 lbs. the heavy-duty setup is recommended. It comes with a big 10.750” diameter (.810” thick) rotor for rapid heat dissipation and Dynalite 4-piston calipers, plus everything required to complete the installation. $690.00. Optional for this kit are polished billet calipers. With 12.19 rotors. From $780.00

C5/C6 Front Brake Kit

The perfect mate to chassis with C5/C6 front suspensions. Choice of 13” or 14” rotor, 6 piston caliper. 13” priced from $1505.00. 14” priced from $1635.00

C6 Rotor & Caliper Kit

C6 rotor and caliper kit comes with right hand & left hand. 13” rotors, Corvette calipers, brake pads, and hardware. $975.00

Disc Brake Conversion

Put 11” Ford brake rotors and GM calipers on OEM or aftermarket Mustang II spindles. Includes adapter brackets, new brake rotors, calipers with pads, bearings, seals, dust caps and hardware. Spindles and brake lines NOT included. $580.00. Available in 5-on 4-1/2” or 5-on 4-3/4” patterns.

Wilwood Carbon Ceramic Brake Kit

The space-age braking technology found on the ZR1 Corvette can be yours with Wilwood’s new carbon ceramic brakes. Extra light rotors reduce unsprung weight for better handling and are very long-wearing. Call for pricing and applications.

W6A Front Brake Kit

This innovative front brake kit features a 6-piston caliper and big 14.25” slotted vented cast iron rotor for optimum swept area. Fits C6 Corvette spindles. From $1,830.00

Superlite 6 Big Brake

Billet SL6 calipers come with an aluminum hat, mounted 13” vented iron rotors, and forged aluminum hubs. A powerful and compact braking system. From $1,600.00

Wilwood C5/C6 Front Brake Kit

The perfect mate to chassis with C5/C6 front suspensions. Choice of 13” or 14” rotor, 6 piston caliper. 13” priced from $1505.00. 14” priced from $1635.00

C6 Rotor & Caliper Kit

C6 rotor and caliper kit comes with right hand & left hand. 13” rotors, Corvette calipers, brake pads, and hardware. $975.00

Wilwood Carbon Ceramic Brake Kit

The space-age braking technology found on the ZR1 Corvette can be yours with Wilwood’s new carbon ceramic brakes. Extra light rotors reduce unsprung weight for better handling and are very long-wearing. Call for pricing and applications.

W6A Front Brake Kit

This innovative front brake kit features a 6-piston caliper and big 14.25” slotted vented cast iron rotor for optimum swept area. Fits C6 Corvette spindles. From $1,830.00

Superlite 6 Big Brake

Billet SL6 calipers come with an aluminum hat, mounted 13” vented iron rotors, and forged aluminum hubs. A powerful and compact braking system. From $1,600.00

Wilwood C5/C6 Front Brake Kit

The perfect mate to chassis with C5/C6 front suspensions. Choice of 13” or 14” rotor, 6 piston caliper. 13” priced from $1505.00. 14” priced from $1635.00

C6 Rotor & Caliper Kit

C6 rotor and caliper kit comes with right hand & left hand. 13” rotors, Corvette calipers, brake pads, and hardware. $975.00

Wilwood Carbon Ceramic Brake Kit

The space-age braking technology found on the ZR1 Corvette can be yours with Wilwood’s new carbon ceramic brakes. Extra light rotors reduce unsprung weight for better handling and are very long-wearing. Call for pricing and applications.

The space-age braking technology found on the ZR1 Corvette can be yours with Wilwood’s new carbon ceramic brakes. Extra light rotors reduce unsprung weight for better handling and are very long-wearing. Call for pricing and applications.
**Emergency Brake Cable Kits**

Designed for use on Wilwood rear brakes with built-in parking brake. Choice of black or braided stainless steel cable housings.

- E-brake cable kit (black sheath) $155.00
- E-brake cable kit (stainless sheath) $220.00

**Wilwood Master Cylinder**

Aluminum tandem chamber Master Cylinder, die cast, premium alloy with black anodized billet lid. Designed for a wide range of custom manual or power brake applications.

- 26011190 M/C Combination Volume Line and Bracket Mount Kit $135.00
- 26005550 Hi Vol. Tandem 1” Bore M/C $200.00
- 26005552 Hi Vol. Tandem 1” Bore M/C Br. $240.00
- 26004390 Hi Vol. Tandem 7/8” Bore M/C $200.00
- 26004392 Hi Vol. Tandem 7/8” Bore M/C Br. $240.00

**Precision Residual Pressure Valves**

Maintains pre-set pressure in drum brake setup and positive caliper action in disk brake systems. Especially helpful in installations where the master cylinder is mounted low on the chassis.

- 26032780 2-lb. RPV with Fittings $24.00
- 26032790 10-lb. RPV with Fittings $24.00

**Hi-Temp Brake Fluid**

Specially developed for racing. Has a minimum dry boiling point of 570°—substantially higher than DOT 3 or 4 requirements! Also designed to lubricate and clean brake system internal parts. Has a very low viscosity, which facilitates easy bleeding of brakes and eliminates problems of fluid foaming from excessive pumping.

- 29006320 Wilwood Hi-Temp 570° Fluid, 12 Oz... $10.00

**Adjustable Proportioning Valve**

Set the proper front-to-rear brake balance with this handy in-line Proportioning Valve. Ideal for both disc/disc and drum/disc setups. Includes Wilwood Proportioning Valve and the fittings to facilitate installation. For racing or street use.

- 26084190 Wilwood Brake Proportioning Valve... $50.00

**M/C Mounting Brackets**

AME manufactures several mounts that accommodate the popular Mopar tandem master cylinder. They are made of 5/16” steel plate, to fit round tube or 2”x3” frames, and come with gusset. A bracket-style unit that is designed for use on a crossmember (use w/Morrison SuperCar) is also available.

- 32555811 (A) Tri-5 Master Cylinder Adapter Plate $15.00
- 52496300 (B) Chrysler Master Cylinder Mount for SuperCar Chassis $30.00
- 52496200 (C) Chrysler Master Cylinder Mount Square Tube Chassis $22.00
- 52496100 (D) Chrysler Master Cylinder Mount Round Tube Chassis $22.00

**Tandem Master Cylinders and Installation Kits**

The Mopar tandem M/C is the industry “standard,” and available in cast iron or aluminum. Our 5-piece Master Cylinder Rod Kit facilitates installation (components listed above).

- 52490050 7/8” Tandem Mopar Mstr Cyl $110.00
- 52490080 Mstr Cyl (Cast Iron) w/1” Bore $100.00
- 52490090 Mstr Cyl (Cast Iron) w/1-1/8” Bore $100.00
- 52496500 Master Cylinder Rod Kit $65.00
- 26048940 1-1/16” Aluminum w/Pushrod $130.00

**TecTIP: Brake Systems**

In setting up the brake system for a race car or street machine there are several important factors to consider. These include pedal ratio, required master cylinder pressure & volume, front-to-rear balance and how they relate to the disc or drum setups to be used. You can call Morrison’s experienced Tech Staff for help in getting the right parts for your application.

Roll Bar & Cage Kits

You will find that Morrison roll bar and cage kits are the class of the industry. Easy installation is assured for two important reasons. The bars and cages are computer-designed for the specific applications using contemporary CAD technology, while the tubing is precision mandrel-formed on Morrison’s sophisticated bending equipment. Instructions are furnished with each kit. Final fitting is necessary.

Because each kit is custom made for the application it must be prepaid. All bars and cages are shipped via motor carrier.

8-Point Roll Cage Kit
$300

8-Point Roll Bar Kit

Meets NHRA & IHRA Safety Requirements

8-Point Roll Bar Kit

Our 8-point roll bar and cage kits are specifically designed to strengthen unibody cars by reducing unwanted chassis flex. This has an added benefit in enhancing performance through improved traction and down-track stability. Substantial driver protection is also afforded with these fitted assemblies. The roll bar is made of 1-3/4”x.134” steel tubing. Please specify make, model, and year of car when ordering.

20203000 8-Point Roll Bar .............................................. $220.00
20203500 8-Point Roll Cage Constructed Out of 4130 Chrome Moly .......... 440.00

20206000 8-Point Roll Cage .................................................. $300.00
20206500 8-Point Roll Cage Constructed Out of 4130 Chrome Moly ........... 600.00

ROLL CAGE TECH TIP:
Tube Notching

You may have heard the old adage, “measure once, then measure again before cutting.” This certainly applies to roll cage/bar assembly, where tube notching plays a vital role in ensuring that everything fits! See page 65 for a nifty tube notcher.

Custom Round & Rectangular Tube Bending

One of the things we do best at Art Morrison Enterprises is bend tubing. Our shop is equipped with computer-controlled equipment that can accurately form tubing up to 2”x4” in size with the quality work that comes from using special mandrels. Our engineering staff can transform your ideas into working drawings and AME’s production team can bring them into reality. Through extensive experience we know what can be done with various size round and rectangular tube and can deliver what you need. Please call for custom quotes.
10-Point Roll Cage Kit

The ultimate in stiffness, strength, triangulation, safety, and performance. Each kit is made from 1-5/8" x .134" steel tubing or 4130 chrome moly in the lightest configuration possible without sacrificing the system's strength or protection. Added front and rear struts provide the rigidity needed to realize the benefits of fine chassis tuning, a definite plus for the serious-minded racer. Cages include dash bar and driver's side rocker bar. Cages ordered by make, model and year of vehicle. Designed for the do-it-yourself home builder. Get installation details in our “Fast Track” video.

Please note that while Morrison lists this as a 10-point cage, to reflect the true number of chassis contact points, other manufacturers call this a “12-point” cage, adding in the side bars (which are included in the Morrison kit) to their count. Compare “apples to apples.”

20209000 Mild Steel Roll Cage Kit.................... $335.00

Anti-Roll Bar Assembly

This adjustable torsion bar assembly will help eliminate ET-robbing body roll. Bar exerts pressure on the rear end housing to prevent roll.

12120800 Anti-Roll Bar ................................................................. $270.00

Now Available

3 Sizes!

Formed Aluminum & Steel Wheel Wells

Morrison makes it easy to “tub” any vehicle with these premium grade formed wheel wells. You can choose between .032” aluminum or 22-gauge steel, as well as three sizes: 32, 38 and 40 inches in diameter. The panels fasten together with “Pittsburgh” interlocking seams for both ease of assembly and an excellent seal. You don’t want smoke pouring into the driver’s compartment during a burn-out!

The top panels feature four rolled beads and the side panel comes with a circular bead to provide extra rigidity and a finishing touch. The kit is shipped flat to reduce the chance of freight damage. To make the assembly process easier, invest in a set of Cleco pliers & fasteners. See page 65 for details.

Also available are 8” tub extensions, which can be employed for “mini-tub” use.

**ALUMINUM**

Steering Column Kits, Mounts & Accessories

AME’s lightweight, rugged steering column kit is perfect for racecars, street rods and other applications. The complete kit features a 24” x 1-5/8” aluminum column with nylon bushings, plus a 1-5/8” o.d. chrome moly shaft (24” or 40” length, also available in D.O.M.), splined U-joint, hexagon quick-release hub (fits most popular steering wheels) and a mounting kit.

The steering column mounting kit consists of two collars and two pair tubular “legs” to facilitate installation. All of this is package priced at $35

- 51510000 Steering column with shaft, splined adapter and U-joint............................. $180.00
- 51510500 Aluminum column tube (24”) with bushings........................................ $50.00
- 51520000 Steering Column Mounting Kit........................................ $85.00
- 53540000 Hexagon Quick-Release Hub........................................ $40.00

Steering Column Kits, Mounts & Accessories

Velocity Stacks

Morrison’s contoured aluminum velocity stacks enhance air flow to the carburetor. For standard 4150-type 4-barrels or 4500 series.

- 46460000 Standard 4150 Velocity Stack........ $30.00
- 46445000 Dominator 4500 Velocity Stack.... $35.00

Parachute Release Kit

Designed to provide a sure, positive release of the drag chute. Kit includes a machined billet aluminum handle, mounting tab and all required cable attachments. Compact unit is perfect for use in a “door car” or dragster.

- 5885211 Parachute Release Kit.................. $45.00

Parachute Release Kit

Splined Steering Couplers

Attach a steering shaft to your steering box or rack & pinion with one of these splined couplers. Each adapter features a 3/4” bore on one end and a splined end on the other.

- 51501300 3/4” Bore, 3/4”x30-Spline Cplr........ $25.00
- 51501400 3/4” Bore, 3/4”x36-Spline Cplr........ $25.00
Choice Of Front & Rear Steer Rack & Pinion Steering Boxes

To provide precise steering control Morrison offers a choice of Pinto, DSE, Flaming River, Maval and Dodge Omni rack & pinion setups. Both the popular 1971-72 Pinto and the DSE & Flaming River units are used for “front steer” (mounted in front of the spindles) applications. The Omni is ideally suited for “rear steer” type installations. These are all high performance aftermarket products.

86835129 Flaming River Rack (A) ...........$275.00
86835135 Opel Power Rack (B) .......... 525.00
86805231 Maval Power Rack (C) ........ 395.00
86835090 DSE Power Rack 20:1 (D) .... 550.00
86854280 Pinto Rack & Pinion .......... $245.00
30341600 Omni Rack & Pinion .......... $325.00

Opel Power Rack & Pinion Mount

Designed to securely mount the Opel rack & pinion to the crossmember. The unique feature of this mount is that it allows the builder to “rotate” the pinion to allow greater clearance for headers, accessories, lines, etc. $250.00

Aluminum Bushing Kit

Perfect for when optimum steering accuracy is desired, these aluminum bushings eliminate the flex found in poly rack & pinion bushings. $45.00.

Power Steering Cooler

This clever dual-purpose device serves to add to the capacity of your system while also providing important fluid cooling. The aluminum fins help dissipate heat, and also add a stylish touch that will enhance most any vehicle. Cooler fluid temperature contributes to improving the performance of any power steering system and also serves to increase fluid life. $60.00.

Reservoir Tank

Here’s a nifty way to store power steering fluid in your vehicle. All-aluminum Tank, cap, fittings all for $110.00.

#86806022

Double U-Joints

Designed especially for use in applications where the steering shaft intersect angle is very severe, these special “double” U-joints will work effectively at angles up to 60°. They are available for a variety of popular applications and priced from $165.00.

Billet Rack Mount

These precision machined clamps are just what you need to install a Pinto or Omni rack in most applications. Made of billet alloy. $45.00

#30321245

Steering U-Joints

Engineered for use in race car and street rod steering systems, heavy-duty Borgeson needle bearing U-joints are the optimum way to link multi-angle shafts. Needle bearings provide for smoother operation while reducing backlash.

Also available are standard U-joints with female bore on each end or one bore and one splined end with set screw bore locks. Available for all popular splined steering shafts. Priced from $60.00.

#86835106

Steering Shaft Kits & Components

Art Morrison Ent. has developed an expertise in steering, and can easily configure a complete setup for your particular street machine, rod or race car. Morrison stocks a wide assortment of Borgeson quality components, and manufactures a number of specialized steering components. Call toll-free for details and design assistance.

#51500355

Woodward Racks now available

NOTE: Max pump pressure to be used is 1100# PSI

86835106 Woodward Racks now available

Rack Fitting Kit

Contains pressure and return fittings that convert rack to -6AN. 86835155 Kit .............................................................. $40.00

Aluminum Bushing Kit

Perfect for when optimum steering accuracy is desired, these aluminum bushings eliminate the flex found in poly rack & pinion bushings. $45.00.

#66835106

Steering U-Joints

Engineered for use in race car and street rod steering systems, heavy-duty Borgeson needle bearing U-joints are the optimum way to link multi-angle shafts. Needle bearings provide for smoother operation while reducing backlash.

Also available are standard U-joints with female bore on each end or one bore and one splined end with set screw bore locks. Available for all popular splined steering shafts. Priced from $60.00.

#66835106

Power Steering Cooler

This clever dual-purpose device serves to add to the capacity of your system while also providing important fluid cooling. The aluminum fins help dissipate heat, and also add a stylish touch that will enhance most any vehicle. Cooler fluid temperature contributes to improving the performance of any power steering system and also serves to increase fluid life. $60.00.

Reservoir Tank

Here’s a nifty way to store power steering fluid in your vehicle. All-aluminum Tank, cap, fittings all for $110.00.

Morrison front motor plates provide for a convenient mounting system to install engines in about any chassis combination. Each motor plate is precision machined from 1/4" thick, 6061-T6 aluminum plate for a perfect fit. Your choice of lightweight 2-piece setups or stronger 1-piece plates. Available for most popular Chevy, Ford and Chrysler applications.

### Steel Engine Mid Mounts

The perfect compliment to any motor plate fitted application, these steel mounts are installed between the engine and bellhousing and extend to the frame rails. They measure 14"x30" to fit a variety of chassis, 100" thick.

- 19195000 Chevy Mid Mount .................... $55.00
- 19195500 Ford 351M/400/429/460 Mid Mount .................... $55.00
- 19195600 Ford 289/302/351C & W (all 6-bolt blocks) Mid Mount .................... $55.00
- 19195900 Chrysler 273/318/340/360 SB Mid Mount .................... $55.00
- 19196000 Chrysler BB Mid Mount .................... $55.00

### Aluminum Mid Mounts

1/4" aluminum plates (6061-T6 alloy) complete with crank, starter and bellhousing holes. Trim to fit your chassis and you’re in business. 24"x24" $165.00

### One and Two-Piece Aluminum Motor Plates

Morrison front motor plates provide for a convenient mounting system to install engines in about any chassis combination. Each motor plate is precision machined from 1/4" thick, 6061-T6 aluminum plate for a perfect fit. Your choice of lightweight 2-piece setups or stronger 1-piece plates. Available for most popular Chevy, Ford and Chrysler applications.

### Engine Torque Limiter

The amount of torque movement generated by an engine at launch has a very pronounced effect on the way a race car hooks up. To help control this force Morrison offers a handy Engine Torque Limiter kit. It contains all the necessary components to fabricate an adjustable link between the engine and chassis, including mounting tabs, bar, threaded weld ends, rod ends, and all required hardware. Everything you need is in one convenient kit.

Tubing By-The-Foot

Also available with plates and hardware

Tubing By-The-Foot

Also available with plates and hardware

Tubing By-The-Foot

Also available with plates and hardware

Rear Crossmembers & Driveshaft Loop Combos

Morrison offers you a wide selection of crossmembers for ladder bar installations, as well as crossmembers with built-in tubular “donuts” that serve as an effective driveshaft loop.

Tubing By-The-Foot

Also available with plates and hardware

Driveshaft Loops

Complete your chassis package with one of our driveshaft safety hoops. They are available in all popular configurations. Required by many racing organizations.

Frame Connectors

One of the most important chassis modifications you can do to a unibody car is to connect the front and rear subframes. These connectors can be used to reinforce the stock chassis members, or in conjunction with a front or rear clip (or both).

Morrison offers you a wide selection of crossmembers for ladder bar installations, as well as crossmembers with built-in tubular “donuts” that serve as an effective driveshaft loop.

Tubing By-The-Foot

Driveshaft Loops

Complete your chassis package with one of our driveshaft safety hoops. They are available in all popular configurations. Required by many racing organizations.

Frame Connectors

One of the most important chassis modifications you can do to a unibody car is to connect the front and rear subframes. These connectors can be used to reinforce the stock chassis members, or in conjunction with a front or rear clip (or both).
DeLuxe Transmission Crossmember

Designed for use with 2"x3" and 2"x4" rectangular tube chassis. The pad fits both Powerglide and Turbo-Hydro transmissions. It is installed by trimming the 42" crossmember to fit between your rails, welding the tabs to the frame per desired transmission height, and bolting the unit to the frame with the supplied hardware. Overall length 42".

36365700 (A) / 36365701 (B) DeLuxe Transmission Crossmember .......................... $80.00
36365710 OEM Transmission Mount .................................................. 15.00
36365800 Energy Suspension Transmission Mount .............................. 40.00

Transmission Crossmember With Clearance For Exhaust

This unique “Double Hump” crossmember has been designed to provide secure mounting for most popular transmissions while allowing clearance for the exhaust system. Can be used with either 2"x3" and 2"x4" rectangular tube chassis, and installed to facilitate quick removal. Some trimming of the crossmember required. Overall length 57”.

36365560 Transmission Crossmember .................................................. $80.00

Quick Release Trans Mounts

Designed to facilitate securely mounting a transmission while also providing quick removal features for on-track efficiency. The crossmember style unit will fit Chevrolet Powerglide, GM Turbo-Hydro 350 and Turbo-Hydro 400, plus the Borg-Warner T-10 transmissions. It comes with a saddle-equipped crossmember plus mounting tabs and hardware. Please note that some trimming of the crossmember is required. Overall length 42”.

36365500 Quick-Release Transmission Mount ............................................. $60.00

Energy Suspension Engine Mounts

Replace those nasty, rotting rubber engine mounts on your Chevy with these high performance polyurethane-padded units from Energy Suspension. They will improve handling and acceleration through reducing movement. Kit includes all required fasteners.

19190260 Energy Suspension Engine Mounts .............................................. $85.00

LS Engine Mount Kit

We’ve developed a highly effective mounting package for LS-series engines that incorporates Energy Suspension polyurethane bushings, and adapter plate with a positive stop, and OEM-style Chevy mounts.

32555740 LS Engine Mounts (Polyurethane) ...................................... $240.00
32555745 LS Engine Mounts (Rubber) ............................................. $175.00

Chassis Stiffening Frame Gussets

These handy 2"x4"x.120" steel gussets are perfect for strengthening rectangular tube chassis at a number of key points. Stiffening the chassis will improve acceleration, handling and ride characteristics. They are cut on a 45° angle. Sold individually.

32344000 2 x 4 Gussets (Each) ...................................................... $10.00
Spherical Rod Ends

These commercial grade rod ends are ideal for linkages and other light-duty applications, and they can also be used on the bottom bars of a 4-link suspension when budget is an issue. Check the potential forces to be exerted when deciding between commercial grade or heavy-duty 4130 units. For example, the radial static load of rod #89890700 is 13,831 lbs., compared to triple that for a chrome moly unit. All spherical rod ends are supplied with jam nuts.

4130 Rod Ends

Our 4130 rod ends are designed to provide maximum strength for all high-load suspension applications. Ideal for top rods of 4-links. Radial static load on #89892600 is 28,081 lbs. For the most severe applications, our part number #89892900 and #89892910 ends are special heavy-duty models and positively the strongest of all 4130 rods. They are rated at 40,572 lbs. radial static load. Jam nuts included.

Female Rod Ends

Female spherical rod ends can be used in most applications where rod end must thread onto a rod-type linkage. Uses include clutch and carb linkages. Complete with jam nuts.

4140 Specialty Rod End

For those extreme-duty applications, we offer a specialty rod end. The solid rod end is most often used on rear susp. ladder bars. Sold individually.

Weld Clevis

Attach tubing to chassis tabs, etc. with our clevis fittings. Just slip clevis joint into end of a tube and weld in place. The functional simplicity of the clevis works well in many other applications. Available to fit the most popular tubing sizes. Sold individually.

Johnny Joint & Stainless Steel Poly-Bushed Rod Ends

For street applications where ride comfort is a consideration, we offer Johnny Joints and polyurethane-bushed 17-4 alloy stainless steel ends. Ends are available with right hand and left hand threads featuring a 5/8" bore and 3/4" shank.

*Anti-seize should be used in all Rod End installations

800-929-7188 • fax: 253-922-8847 • www.artmorrison.com
Special Chassis & Suspension Mounts, Brackets, Tabs And Flanges

Use these convenient, time-saving brackets, tabs and flanges for mounting assorted chassis and suspension components to your frame. Please note that some of them are designed for use on our SuperCar chassis, and others are more universal. All Morrison brackets, tabs and flanges are precision formed by conscientious craftsmen and ready to save you time and hassles in building your race car or street machine.

**Threaded Tube Adapters**

Add a threaded fitting to the end of a tube with these tube adapters. Each size is available with either right or left hand threads. Sold individually.

- 8169320 (A) 5/16" TTA R.H. $6.50
- 8169321 (B) 5/16" TTA L.H. $5.50

Tubing Notcher
When installing a roll bar or cage it is important to obtain the optimum fit for all intersecting joints. This handy device uses hole saw blades to “fishmouth” the tubes, and can be powered by an ordinary 1/2” variable speed drill press (a maximum of 550 RPM is recommended). The fixture clamps to the tubing, and the cutting angle can be adjusted from 45° to 90° to handle virtually any required fit. This device economically delivers true professional results and saves time!

Chassis Construction & Setup Protractors
These tools serve many valuable functions in setting up a race car or street machine. Use them for setting suspension geometry, engine position, chassis alignment, etc. The Electronic Digital Protractor has an accuracy of ±0.1° at level and plumb, and has a machined aluminum frame. Our economical analog protractor features a heavy-duty magnetic base, 4" diameter dial with a full 360° read-out in one degree increments and a magnetic base. The plumb bob makes it easy to square a race car. Includes 16’ of string.

Terms and Conditions

Payment
Art Morrison Enterprises, Inc. accepts cash, money order, cashier’s check, personal checks (check verification) or orders charged to Visa, Master Card and American Express accounts. All custom-ordered components, or those shipped via motor freight, must be prepaid.

Shipping and Ordering
All shipments are F.O.B. Fife, Washington. All Motor Freight shipments must be prepaid with a credit card, money order, cashier’s check, check or cash. Credit card purchases for first time purchasers must be shipped to the cardholder’s address. This procedure is designed to protect you, the cardholder.

Foreign Shipments
Unless restricted by law, Art Morrison Enterprises will ship to foreign customers. Full purchase price (in U.S. currency) must accompany order. Name of desired freight carrier, and all required import/export documents must be included with order.

Damaged or Missing Product
Shipping damage should be noted with the carrier at the time of delivery and the claim process started in accordance with that company’s procedures. Notify Art Morrison Enterprises, Inc., as soon as possible.

Custom Items
Products custom-made to the specifications of the customer, such as frame rails, axles, etc. are non-returnable for reasons other than defects in materials or workmanship.

Prices
All prices are subject to change without notice. Art Morrison Enterprises is not responsible for typographical price errors in this catalog or our advertising.

Returns
All returns of merchandise must include a Returned Goods Authorization Number (RG#) prominently displayed on the return packaging. This RG# can be obtained from your representative at Art Morrison Enterprises, Inc. All credits and refunds are subject to a 15% restocking charge and will only be made for goods that are unused, unaltered, undamaged (including rust) and ready for resale. Custom manufactured items are not subject to return for credit or refund. A copy of the original sales documentation must be included with the returned merchandise and include complete current contact information—name, address, phone, fax, e-mail, etc. Art Morrison Enterprises, Inc., will refuse any COD or collect shipments. After 90 days, no credits or refunds will be allowed for any merchandise.

Specifications
Non-critical specifications and plating are subject to change without notice.

Disclaimer
Seller disclaims any warranty, express or implied, with respect to the parts sold hereby as to merchantability, fitness for particular purpose, or any other matter.

Racing Association Rules
Because a number of products manufactured and/or sold by Art Morrison Enterprises are subject to approval by various race sanctioning organizations, the customer is responsible to verify that the items purchased comply with the rules they compete under. The “legality” of the vehicle is up to the builder.

Warning
Products manufactured by Art Morrison Enterprises, Inc. and/or contained in this catalog are designed for competition purposes. Accordingly, use of said products, or modification to or construction of a vehicle for those purposes may create dangerous conditions which could cause bodily injury, and the buyer hereby expressly assumes all risks associated with any such modifications.

More Important Tech Info For Do-It-Yourself Builders!

Matt Jones equipped his trusty ’69 Camaro with our new Multilink IRS and the editors of Super Chevy magazine were blown away by its handling ability. Read all about it in the February, 2014 issue or check out the facts about AME’s revolutionary new Multilink IRS on pages 4-5 of this catalog.

Morrison “How To” Technical Videos...

We’ve got a pair of highly informative videos that will be an asset to any do-it-yourself builder. The first is our famed “Fast Track” video, which covers step-by-step installation of a rear suspension clip, roll bar, subframe connectors, fuel cell and wheel tubs. Included are many handy tips that help you get professional results. Our second video covers installing a Morrison I.F.S. front end on a fat-fendered street rod. Our DVD includes both front and rear videos for $25 (plus s/h).
