

AIR SPRING PLUS

**Now with
Wilwood Spindles**

Air Spring Front Clip Package

For those applications where the builder wishes to adapt a Morrison Air Spring+Plus™ suspension to an existing chassis, special front subframe assemblies are available. Like all other Morrison frame components, the subframes are individually CAD-engineered for the year/make/model vehicle and the rails are mandrel-bent to form “show quality” bends.

The subframes are made of 2"x4"x .120" wall rectangular tubing, and fixture-welded by Morrison's staff of experienced

craftsmen to assure proper alignment of critical suspension components.

Air Spring+Plus™ suspension packages are available individually for front subframes. The air springs, hoses, fittings, air pump, storage tank and dash-mount control panel (single switch) come as a package, while the front suspension—control arms, sway-bar, and shocks. It pays to buy necessary related items at the same time.

Our typical air front clip package, shown above for \$3,685.00, contains a

custom CAD-designed 2"x4" firewall-forward subframe, tubular control arms with Air Spring+ mounts, shock absorbers, sway-bar, AGR Power rack, spindles, and springs.

AIR2100 Factory-Welded 2"x4" Front Subframe "Clip" for Air Spring+Plus™ Suspension	\$1,565.00
86835210 Wilwood Pro Spndls.....	325.00
86835120 Flaming River Rack (manual).....	275.00
